

Erik Kothny

We
show you
how it's done,
Fighting,
You must do it alone.

Dedicated to my grandmother, Frieda Pommer
(see last page)

Why this book?

We are increasingly controlled by gray eminences and systems. Orwell's "1984" and Big Brother are no longer science fiction, but everyday life.

Only martial artists, and especially fencers, have learned to fight independently on the planche and to stay largely away from external influences. But that also has to be learned.

This book is therefore not primarily intended to be a training guide for fencers, but to educate about connections that influence the athlete from the outside. This is not only about the sporting environment, but also about forces that deliberately instrumentalize sport for their own purposes.

Those who are aware of these connections will be able to defend themselves against these influences not only on the planche, but also in everyday life.

The aim of this book is to strengthen the individual and protect him from foreign influences.

Erik Kothny
Author

Erik Kothny

We
show you
how it's done,
Fighting,
You must do it alone.

This book will win few friends among politicians, hardly any officials, and certainly no lobbyists. They will try to bury it in silence.

"Why? "

They will complain that it contains political statements. They are right about that. And why does it include political statements?

Because politics, officials, and lobbyists are improperly interfering in the matters of athletes."

But athletes and true sports functionaries driven by passion can resist. They can pass it on to other idealists.

Introduction

Foreword.

In the Olympic year 2000, Stefan Keber, sports editor at Südwestrundfunk Mainz, made a film about my son: "Willi's Rescue." ²⁾ The documentary tells the story of a special relationship between my adoptive son and me.

25 years later, I put the video online.

Norbert reacted in a very special way. He wrote:

"Dear Erik,

I watched the documentary you sent me, and I am deeply moved and speechless. It is such an incredibly heartbreakingly and at the same time, hopeful story. Seeing how you adopted a child and, with so much love, dedication, and wisdom, helped him become the shining star he is today.

This shaping of two people in such deep harmony and connection, born from your unconditional love, simply cannot be a coincidence. It is an incredible testimony to your radiant soul and your ability to lead a life from the depths to success.

You are an absolute inspiration, and this heartwarming documentary is the most beautiful proof of what love and faith can achieve. Two radiant people, bound together for eternity.

Norbert."

In my book “Migration Remigration” I picked up this story and, using the example of both children Somkhit and Willi, showed that the two are not mutually exclusive, provided they are lifted out of the spiral of hate and hostility.

Only two things are necessary:

Love, helping another human being.

And the willingness of the other person to accept that love and build upon it.

If this response is missing, love fizzles out into nothingness.

To be specific: the so-called refugee applauders and teddy bear throwers only pretend to welcome strangers.

In reality, after the fanfare at the train station has faded, the migrants are left to fend for themselves. No bond is created between givers and receivers. The path leads to parallel societies, with all the problems we have known since 2015, after Merkel’s uncontrolled border opening.

In my book “Migration Remigration”³⁾ I summarized it as follows:

Is remigration a bad word? No! But with one condition: migration must first have been successful. Using the example of my sons, I show how migration and remigration can succeed. Both children grew up in a tin hut on the River Kwai before coming to Germany and integrating. After a successful sports career, both returned to their country of birth. They made headlines worldwide when they rebuilt a fishing village destroyed by the tsunami with German help. Today, both feel at home in both cultures. This was only possible because they contributed through achievement in both countries. Now I live as a migrant with them.

Thus, our life story could already be considered written. I could lean back contentedly and enjoy my retirement.

But the wheel of life keeps turning.

A decisive factor in this life story is sport. Sabre fencing. A combat sport.

A mirror of real life.

Prolog

Prologue

DIE Wahrheit gibt es nicht.
Wahrheit ist wie Licht,
das sich durch ein Prisma windet
und seinen Platz im Spektrum findet
aus dem der Betrachter dann,
was er möchte, lesen kann.

Der eine sieht die Wahrheit drastisch,
ein anderer wertet sie phantastisch
Jeder sieht sie wie er will.
Ausgerichtet auf sein Ziel
Projiziert er sie als Bild
Das es zu erreichen gilt.

Dieses Buch
Ist ein Versuch
Den Kampf des Lebens zu trainieren
Zu siegen oder zu verlieren.
Du musst dir nur noch sicher sein:
Den Kampf, den führst du ganz allein.

There is no single truth.
Truth is like light,
bending through a prism and
appearing as a spectrum of colors
from which each observer
reads whatever they wish to see.

One person sees truth as harsh,
another interprets it as wondrous.
Each sees it in their own way,
shaped by their own goal.
They project it as an image
a vision they strive to reach.

This book
is an attempt
to train for life's battles:
to win or to lose. You
need only be certain of one thing:
The battle is yours alone to fight.

This book, too, does not claim to present the truth.
It merely offers perspectives.
Points of view that each reader must place, weigh,
and supplement with their own experience.

In the end, the aim is for all of it
to form a picture
by which one can find direction.

Us

Wiradech “Willi” Kothny, left
Adoptive son and world-class fencer.

Somkhit Phongyoo, center
Foster son and sabre coach.

Erik Kothny, right
Father and journalist.

Mehl

A decisive influence on both the sporting development and the character of my sons was Eberhard Mehl.

As a foil fencer, Mehl won bronze with the German team at the 1960 Olympic Games in Rome.

Later, when he began his coaching career, he switched to sabre. In Hungary he was trained to become a master.

Mehl was a certified sports teacher and, alongside traditional fencing technique and tactics, placed strong emphasis on athleticism.

At competitions, he would sit quietly but intently at the side of the piste, observing every action. He never called out instructions to his pupils mid-fight.

His reasoning: "What I haven't taught in training, I can't make up for on the piste. I've shown them how to do it. The fight they must fight alone."

Somkhit Phongyoo, as a coach, later adopted this very philosophy.

But there was something else Mehl did differently from his fellow trainers.

Here's an example first:

"Mr. Kothny, please report to the broadcast studio immediately," barked a voice over the loudspeaker in the editing room, where I was just finishing a film on a current event. Time was so short that I couldn't record the commentary in the studio, I had to deliver it live on air.

I yanked the cassette out of the editing machine and dashed down the stairwell into the broadcasting complex. At the bottom, I made a sharp right turn into the foyer and bang! straight into the wall. The entrance was actually on the left, through the foyer, into the studio.

What had happened?

Two years earlier, during renovations, the entrance to the foyer had been moved to the other side of the stairwell. Over time, everyone had gotten used to it, and no one thought about how it used to be.

But under extreme stress, old habits stored in the subconscious often override newly learned behaviors. This can last for years.

In this case: the old habit of “turn right” won out over the newly learned behavior of “turn left.”

And it’s the same in fencing.

Once, a coach from Tauberbischofsheim lured away one of Mehl’s successful pupils. He told him: “Forget everything you learned from Eberhard. That’s rudimentary. I’ll take you to a higher level of technique.”

The result? That pupil never won another tournament. In moments of pressure, the old patterns buried in his subconscious overpowered the delicate new techniques, leaving him insecure and hesitant.

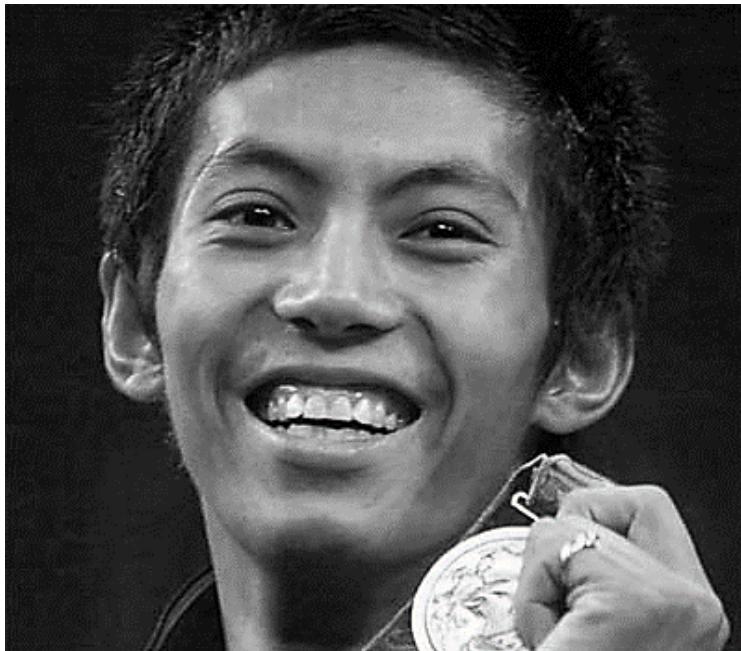

And there was something else about Mehl’s methods. Unlike most coaches, he never trained new techniques using the traditional approach, practicing movements slowly at first, then gradually increasing speed. With him, it was full throttle from the very start.

Why?

Because the brain and muscles are lazy.

If you ever show them that a movement can be done slowly, they'll remember and fall back on it. That's why, from the very first second, you must train them to believe there is only one way: the fast version. That imprints itself forever.

Automated movement patterns are half the road to success.

The Crash

Pattaya, December 11, 2024:

Sukhumvit Road. A four-lane highway leading toward Bangkok.

On the way to the vehicle registration office, my Yamaha is struck from behind with overwhelming force.

The bike lifts off.
I slam onto the concrete.
My helmet shatters.
Consciousness slips away.

The hands of my shattered watch freeze at 10:46:19.

A single moment.
inviting reflection on everything that led up to it.

He-Man

When I wake up in the ambulance after the accident, searing pain shooting through my right elbow, I see through a veil of tears, my son Willi standing at my bedside.

"Hello... He-" I manage, searching for a name from long ago, from a time when the roles were reversed: my son in the bed, and I standing beside him.

"Hello... it's me, Willi, your son."

"I know, Willi," I reply with a strained laugh.

And suddenly, the name I had been reaching for comes back: He-Man.

"Did you bring me a He-Man?" I ask.

Willi knows instantly what I mean.

"I am He-Man," he laughs.

And in truth, he was. Upon arriving at the hospital, he had placed the equivalent of 6,000 euros on the table to ensure my surgery could go ahead.

In Thailand, nothing moves without advance payment. Otherwise, they would sooner leave you dying in a hospital corridor.

I slip back into unconsciousness from the pain—and wake again, this time in 1987.

"Papa, Papa, my head is exploding!" Willi had cried, stumbling into my bedroom at two in the morning, doubled over in agony. I grabbed the phone. Ten minutes later, our family doctor, Dr. Audick, was at the door.

"Meningitis," he diagnosed. "Straight to the hospital!"

Fifteen minutes later, Willi was in the emergency ward of Koblenz's Marienhospital.

The next morning, a doctor told me gravely: "Meningitis. We punctured the spinal cord and drained cerebrospinal fluid to relieve the pressure on the brain. Beyond that, we can only ease the pain and use antibiotics to stop infection from further weakening your son.

He must fight the virus with his own immune system. Your task is to help strengthen his body's defenses."

I knew meningitis could end in only three ways: death, brain damage, or recovery.

How could I help my son? I wracked my brain, and found the answer.

Only He-Man and his friends could work the miracle.

He-Man was a comic-book hero of the 1980s who fought against evil and always won. I rushed to the nearest toy store, bought a He-Man figure, and brought it to Willi's hospital bed.

"This is He-Man," I explained. "With his sword, he fights against evil. He will help you drive the virus out of your head."

Every morning and every evening, I reinforced the frontline with another figure, strengthening the defense against meningitis. And indeed, by the time I had collected them all, the viruses surrendered. Willi recovered.

Willi had defeated death.

Later, when my son took up fencing, he feared no opponent.

And now, decades later, he stands at my hospital bed, returning to me what I once gave him:

He-Man.

The Battle

Battle rages here;
They are dust on the beachfront.
Clash of iron rings out,
And the stallions are screaming.
A body drops, stone-like, hard to the ground,
A beast roars out, hurling into its death.
Arrow-flash, axe-swing, spear-throw,
Every kind of death is delivered.

Listen. Earth shakes, the ground is trembling,
Battle-roar, hail of blackened projectiles.
A wheel explodes, there the gesture
of a fallen man at the edge of his dying.
Arrow-flash, axe-swing, spear-throw,
Every kind of death is delivered.

The hero storms forward, shrieking, relentless,
Neither arrow nor blade can touch him.
Foam from the maddened horses stains his helm,
And his sword,
The blazing one,
Cuts and consumes.

And gasping, death snorts hot on his neck,
Blinded by harvest, colossal and raging.⁴⁾

Achilles, Trojan War
13th Century B.C.

A description of battle, three thousand years later:

En garde – stance
Prêt, allez – ready, go
Attaque – attack
Parade – parry
Riposte – riposte
Touché – hit
Point – point

Willi Kothny,
Olympics 2000 A.D.

Between these two duels lies more than three thousand years.

For both fighters, their decisive encounter ended in defeat.

The hero of Troy died after being struck by a poisoned arrow, shot by Paris into his heel, the only vulnerable place on his body. Achilles had been made invulnerable by being dipped into the river Styx, except for the spot where his mother held him, his heel.

The hero from a tin hut in Kanchanaburi lost his last decisive bout against Ruangrit Haeckert when his Achilles tendon tore during an attack on his Thai opponent. The injury was not fatal, but it ended the career of one of the world's greatest sabre fencers.

The closing line of the play Achilles describes both final battles:

"Death is his glory. And yours is suffering."

The sword fight to the death has long since become a ritual.

When two athletes face each other today, they submit to fixed rules. Only what is written in the statutes counts. No origin, no religion, no ideology, no party matters.

That is the principle.

But if the principle were truly practiced, this book would not be necessary. For outside the piste, forces attempt to break the rules and exploit the athlete.

Enormous pressure is placed on the competitor. Only the strongest can resist. The weaker ones are trapped in a system where the rules of fair combat no longer apply.

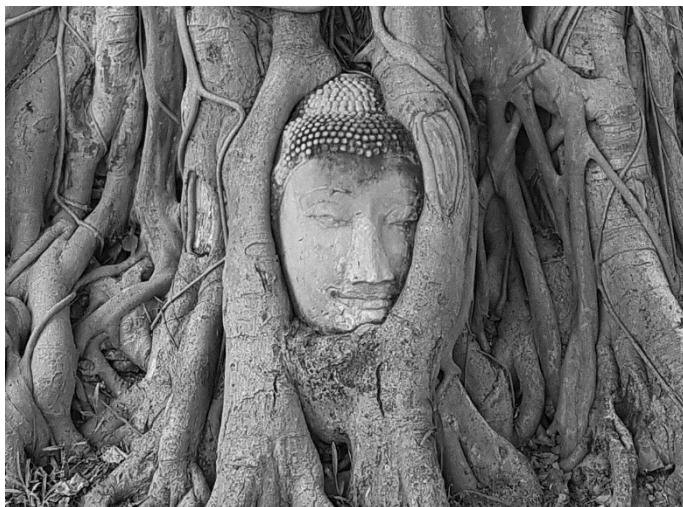

The athlete is defeated before the fight even begins. Many don't even recognize it.

That is why it is essential that athletes understand this system, so they can prepare not only for the opponent in the arena, but also for the ones outside it.

Combat belongs to the very nature of life.

Between the two photos above, not even fourteen days have passed. The tree has entered the fight for survival. Who will prevail in the end?

*

I had just returned home from work when I witnessed a terrible scene.

There was Willi, four years old, standing in front of a hedge, being beaten mercilessly by Klaus¹⁾ Tears streamed down his face. His arms hung limply at his sides while Klaus kept pounding his fist into him, again and again.

I quickly put an end to it, scooped Willi into my arms, and carried him upstairs to our apartment.

"Willi, what happened?" I asked.

He shrugged.

"Why didn't you defend yourself?" I pressed.

"Papa, you told me we're not allowed to hit other people," came the surprising reply.

And he was right. I had told him that once, after the kindergarten had complained that Willi had been playing with a "gun."

In truth, it was just a forked twig he held up while shouting peng peng.

It was Klaus's mother who reported him. She belonged to the peace movement and made sure militant toys were strictly banished from society. But she forgot to teach her own son not to beat up other children.

So I explained to Willi that it's allowed to defend yourself when attacked.

"Of course you have the right to hit back," I told him.
"You just mustn't throw the first punch."

I then practiced with him how to use body posture alone to show he was ready to strike back, enough to deter an attacker from landing the first blow.

I also showed him how to box properly. Simply adopting the boxing stance is intimidating in itself. And I had experience from boarding school, I was known as the biggest brawler in class.

I also explained that a fight ends when your opponent is on the ground or gives up, a rule belonging to our cultural code.

From that day on, Willi was never beaten up by Klaus again.

The Weapon

In sport fencing, there are three weapons: Sabre, épée, and foil.

While the sword was used up until the 17th century as a weapon to kill an enemy, it increasingly became a dueling instrument for defending one's honor with the introduction of gunpowder.

The weapons used in modern sport are high-tech devices designed to register hits electronically with the slightest touch. They have nothing in common with the killing instruments of an Achilles.

A mask, stab resistant clothing, breast protection for women, and a glove on the weapon hand ensure that injuries are avoided.

Fencing is one of the founding sports of the Olympic Games (1896).

Modern sport fencing is shaped by athletics, technique, strategy, and tactics. Although defined as a combat sport, it allows no physical contact, making it one of the sports with extremely low risk of injury. An internationally binding rulebook prescribes strict safety regulations.

Fencing has also become established in para-sports.

Nevertheless, caution is necessary because:
Épée, foil, and sabre are and will remain weapons.

Handling them every day leads to carelessness.
Especially in training, you often see fencers in shorts
or even T-shirts. Coaches often ignore this, indeed,
they even do it themselves.

I remember when Willi joined the national squad and
went to squad training in Bonn, the national coach
tolerated this light clothing and undermined my
efforts to enforce safety regulations in the club.
It is really only a matter of time until an accident
happens and fencing is reclassified as a dangerous
sport.

Somkhit and Willi

I adopted two sons from a slum in Kanchanaburi, on the River Kwai. They went to school and trained in Germany. By chance, both came under the guidance of Eberhard Mehl, a fencing master from Koblenz.

Although they received the same training, each developed a completely different way of fighting.

Somkhit was the more technically skilled fencer. Before a match, he studied his opponents closely, their strengths, their weaknesses and built his tactics accordingly.

He would usually begin with a cautious step forward, securing his flanks, testing the opponent's blade, waiting for a reaction. He feinted, disrupted, pressured until the opponent opened a gap, then struck for the point.

Somkhit was often so certain of success in that instant that his eyes flashed with triumph. Too soon. His opponent would seize that brief lapse and counterattack.

0:1 against him.

Willi was different.

He never studied opponents. With confidence he would say: "Let them figure me out."

He knew the same techniques as his brother, but used them unpredictably. And he thrived on risk. In the split second an opponent lost focus, he would launch himself forward, body stretched horizontally in midair, defenseless for that moment, but landing the decisive cut.

1:0 for him.

Willi fenced from the gut. Like a wildcat against a cobra. It earned him the nickname Mongoose.

The foundation came from their coach, Eberhard Mehl. He broke away from conventional fencing's obsession with technique and tactics, and focused instead on athleticism.

Through targeted strength training, he made his fencers so explosively fast that no one could match their speed.

Once, when Willi faced Rafal Sneyder, the world's best defensive fencer in the 1990s, he hammered him with touch after touch.

Rafal turned apologetically to his coach and said: "I can't see him."

Mehl's secret lay in his periodized training: endurance, then strength, then speed. His fencers entered competition in peak condition every time.

Inevitably, Willi's trophy cabinet overflowed:

8x German Champion

7x Thai Champion

2x Continental Champion (Europe / Asia)

2x World Champion

2x Olympic Medalist

2x Sportsman of the Year (Germany / Thailand)

1x ARD - Fair Play Award Winner

1 x Good Samaritan Award

How was this possible?

Because Eberhard Mehl was a hobby coach. He was not tied to any system, answerable to no federation. He was free to do things his own way.

With just a dozen fencers, the Koblenz club dominated the German rankings and supplied the backbone of the national sabre team.

And Somkhit was part of Thailand's national team.

Recreational Fencing

Do you like dancing? Then dance, go to a club and let loose. Do you enjoy bowling with friends? Have fun. It's good for body and soul. The same goes for snooker, darts, or badminton.

But nobody would ever dream of entering national or international championships in those hobbies.

Fencing often works the same way. It's a sport practiced in "upper circles." Snobbery? Not really. The real reason: fencing is expensive.

You need to calculate whether you can even afford it. And if you can, you need to commit. You enter tournaments, enjoy the thrill of outsmarting an opponent with a technical trick, or tripping up a stronger fencer now and then.

That's how the sport was practiced in Thailand until recently. No wonder, then, that when 13-year-old Willi Kothny returned from Germany to visit his birth country, he wiped the floor with the Thai national team. Still a teenager, under his birth name Klinrungroj, he became Thai National Champion.

Competitive Fencing

High-performance fencing is different.

Once you choose it, you must change your lifestyle from the ground up.

Take this example:

One day, Eberhard Mehl suddenly declared,
"This season, I'll make Andy German Champion."

Andreas was a youth fencer, just a hobbyist.

With his parents' consent, Mehl applied the full training doctrine with absolute consistency:

Study of the tournament calendar

Setting the exact target date for peak performance

Designing the fencing and physical training plan (periodization)

Coordinating with the parents on nutrition
And sure enough, at the end of the season, Andreas Hölzenbein became German Youth Champion.

Top-level sport can be planned.

After that "experiment," Andreas returned to the world of recreational fencers.

From Weakling to Athlete

Willi at 3½ years old: a swollen belly from malnutrition, rotten teeth, covered in bruises, unable to speak.

Metamorphosis through sport

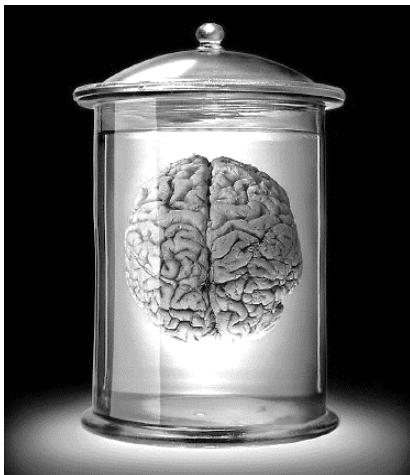

Eighteen years later:
A model athlete, muscles carved, posture strong.
The "silent boy" had studied Communication Science
at Bangkok's International University.

Fencing made it possible. His sporting achievements
had earned him a scholarship

Section 3

Principles

Oxygen

The brain makes up only about 2% of our body weight.

Yet it consumes 20% of the oxygen we take in.

That has a direct effect on concentration.

Take this example: At the "Munich Sword" tournament, the Tauberbischofsheim fencer Carl Stahlschmitt staggered back to the team bench, drenched in sweat, gasping for air. His coach, Toni Zeiss, asked:

"Well? Did you fence Willi?"

Stahlschmitt nodded.

"And?" Toni pressed.

"At first, I could handle him. But then... I lost my focus."

I knew exactly why.

Back then, Willi was probably the most complete fencing athlete in Germany.

His coach, Eberhard Mehl, had designed training that built not only speed but immense stamina.

In practice, he pushed his fencers' heart rates into the 200s again and again, then paused, checked their pulse, and did it all over, and over, and over.

A fencer conditioned like that shrugs off the demands of a bout.

One without that stamina? Soon gasping. Their body runs short on oxygen. And that shortage doesn't just hit the muscles, it starves the brain. Thinking falters. Concentration slips.

Clear advantage to the fitter athlete.

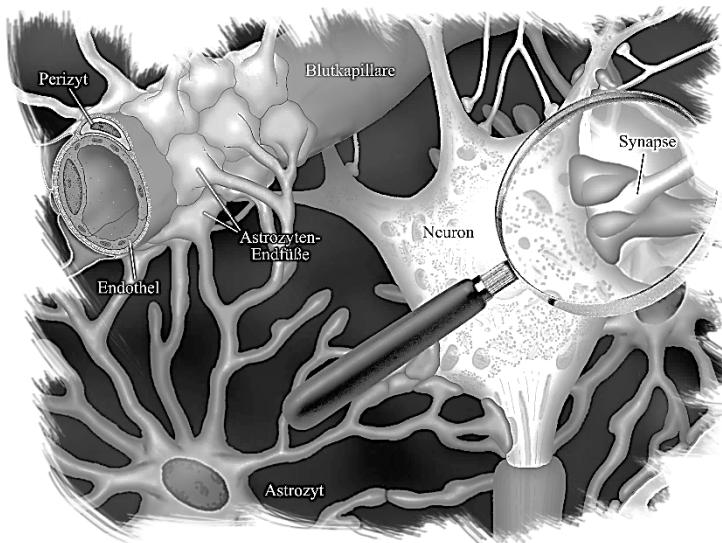

It showed even more when a rule change suddenly gave smokers an edge.

Why?

Fencing needs funding, and funding means advertising. But a sabre match lasts at most three minutes, far too short for a TV ad slot at a World Championship or the Olympics. So organizers introduced a 60-second break halfway through.

Smokers could use it to catch their breath, recover oxygen, and re-enter the match sharper.

And there's another layer.

Look into the brain: it runs the core systems that keep us alive. But when we're born, the brain isn't finished.

It develops, grasping, seeing in color, crawling, walking.

More and more cells link up.

Until around age 12 or 13, the brain can still build new "wiring," making impulses flow faster and

Reactions quicker. After that window closes, the ability fades.

So what does this mean for fencing?

If you don't start training reflexes before 12, you'll never truly develop them. Biologically, it's impossible.

That's why any federation focusing only on people at university, the military, or the police will never hear its anthem played at the Olympics or World Championships.

At the turn of the millennium, Thailand's fencing federation, AFAT. Still relied on military, police, and universities. Youth fencing was almost unknown. Their athletes couldn't keep pace with international demands.

But this truth isn't new. The Romans already knew it. The satirist Juvenal said it best:

„Mens sana in corpore sano.“

It means:

“What we should wish for is a healthy mind in a healthy body.”

The Muscle

Let's get straight to the point: to move, we need muscles.

And to fence, of course, we need muscles too.

But muscles are lazy.

They only do what they must, and they love to rest. Push them harder, and they complain, give out, and punish you the next day with soreness.

The good news? We can fire them up with willpower. The magic word: training.

When a muscle is stressed beyond its comfort zone, it reacts:

“Never again.”

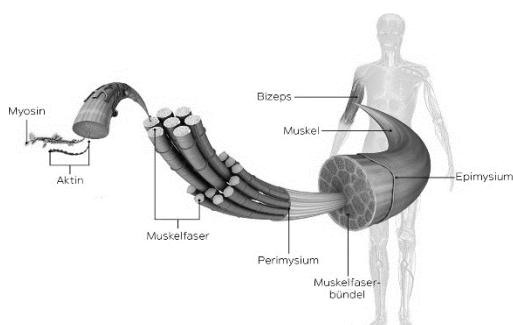

So it adapts. Not immediately, but the next day.

To grow, it needs building material: protein. We supply it through food and give it time, a day to process.

Then we trick it. After rest, we load it again, just a little more than it wants. The muscle responds the same way and grows stronger.

Important: muscles don't grow during training, they grow after. That's why recovery matters. Between

two sessions, take a rest day. Or split your focus: legs one day, arms and upper body the next.

And training isn't just about size. With the right load, we can train for strength, for speed, or for endurance.

In fencing, the smartest approach is a mix of all three.

But muscle needs more than stress. It needs fuel: ATP, creatine, carbohydrates. (Look those up later.) What matters here: when we demand performance, we must give the muscle carbs.

It also needs lubrication, electrolytes.

That's why nutrition is central for high-performance athletes.

Note: yes, there are coaches who build strong athletes through technique training alone, without targeted muscle work. It can work. But it takes far more time. And no matter the method, smart nutrition is non-negotiable.

Nutrition

"I fathered a world champion," boasted Erhard Bauer one evening, after his third glass of vino tinto, when his son Dennis became the cadet world champion in saber fencing in Tenerife.

Yet, the act of fathering was hardly the electrician's most impressive achievement. What stood out far more was his meticulous feeding of carrier pigeons, which Erhard regularly sent to competitions. He fed his birds in sync with the rhythm of tournaments: carbohydrates alternating with proteins. The trophies in his home testified to the effectiveness of this competition-aligned feeding routine.

I even made a film about it under the title:
"Father of a Saber World Champion feeds his son like a carrier pigeon."

A headline that certainly piqued the curiosity of parents of competitive athletes.

Because: the most effective "doping" is nutrition.

We already know that muscles require carbohydrates as fuel, proteins for growth, and electrolytes as lubrication.

Thus, nutrition becomes a part of training itself, and the mother in the kitchen a co-trainer. Without the right diet, training sessions are wasted.

Here are some examples of training-friendly foods:

Proteins	Carbohydrates
Dairy products Eggs, cheese, soy, tofu	Pasta, rice, flour, bread, muesli
Meat and sausage Cooked meat and poultry, tartare, ham	Dumplings, potato dishes, cakes, spaetzle, gnocchi
Cooked, non-smoked fish, oysters, shrimp, squid (seafood)	Ripe apples, bananas, dried fruits, chestnuts
Stone fruits, grapes	Non-alcoholic beer

Note: foods from the protein group should not be combined with foods from the carbohydrate group on the same plate.

Neutral foods can be eaten with either proteins or carbohydrates

Neutral Foods
Small amounts of meat and sausage
Vegetables, salads, spinach, mushrooms, sauerkraut
Nuts and seeds (except peanuts)
Avocado, sprouts, olives, egg yolk, grains, seeds

It's helpful at the start of a season for parents and fencers to shop together with the coach at the local market. Traditions like pre-competition pasta parties or post-competition steak dinners are also great rituals.

Drinks

A proven option is apple juice mixed with mineral water.

During muscle-building phases, some athletes rely on protein supplements after training. This is fine in principle, but caution is needed. Many powders sold in gyms are contaminated and contain banned substances. Only use certified protein powders.

In practice, a balanced diet is fully sufficient for fencing.

A well-rounded diet is the foundation of effective muscle growth and overall fitness. It provides the nutrients the body needs for energy, development, and recovery. Without a smart nutrition strategy, even the hardest training sessions won't deliver results. Proper fueling not only boosts performance in training and competition but also speeds up recovery and muscle repair.

Fresh, unprocessed foods give you better control over nutrient intake. Processed foods are often loaded with sugar, unhealthy fats, and additives that undermine progress. Preparing meals at home ensures that both quality and quantity match the training goals.

Hydration matters:

Water plays a critical role in nearly every bodily function, from metabolism to temperature regulation. Adequate hydration improves performance, aids recovery, and prevents cramps.

Daily recommendation: at least 1.5 to 2 liters of water.

Periodization

Principles

To build muscle, training must follow a five-phase cycle. Nutrition should also be aligned with each phase.

If tournaments are scheduled at inconvenient times, the season may need to be split into two or even three training cycles.

Reason: the peak-performance phase lasts about 2–4 weeks and can only be stretched a little by adding rest breaks. Anyone who wants consistent success must plan their season carefully, like Somkhit here.

Preparation Phase

Focus: light weights, high repetitions

Duration: 4–6 weeks

Goal: develop cardiovascular fitness, muscular endurance, and overall conditioning. All muscle groups should be trained, with special attention to the core (abs and back). Weak core strength often leads to back problems, which in turn limit performance in both training and competition.

No competitions should be entered during this phase. Even fencing-specific training should be at half intensity. If weapons are used, coaches should focus on precise execution of technique and movement. This is the time to learn new actions.

Nutrition: carbohydrate-rich whole foods, plenty of fruit and vegetables. Bring diluted apple juice (1/3 juice + 2/3 mineral water) to training.

General Strength Phase

Focus: 80% of maximum weight

Duration: 3–5 weeks

Now the emphasis shifts to the muscles most critical for fencing (arms and legs). Weak points should be targeted. Physical strength is the best protection against injury.

Fencing-specific work focuses on developing competitive skills, decisive thinking, and acting under pressure. Training loads must follow the coach's exact plan, remember: muscles only grow during rest (48 hours). Overdoing it reduces results.

Nutrition: protein after training is essential for muscle growth. Without it, the training effect is wasted. (Reminder: be cautious with supplements due to possible doping contamination.)

Competitions should still be avoided at this stage.

Maximum Strength Phase

Focus: 99% of maximum weight

Duration: 2–3 weeks

This phase pushes athletes to their physical limit. Heavy weights are lifted only 2–3 times per set, activating even the "lazy" muscles that normally hold back.

Nutrition: protein-focused.

Speed and Explosiveness Phase

Duration: 2–4 weeks

This is the direct build-up to competition. The focus is on developing speed and explosive power. Training now simulates real competition conditions and mirrors the physical and psychological demands of a match.

Warm-up rituals, cool-downs, focus routines (like clapping hands), decisive thinking, and sharp execution become integral to training. Athletes should start entering smaller competitions or friendly tournaments during this stage.

Nutrition: carbohydrate-rich whole foods. Don't forget the apple spritzer.

Competition Phase

Goal: achieve peak performance. This is where speed, power, and explosiveness are fine-tuned. Training intensity is high, but sessions are short.

1–2 days before competition should be stress-free and training-free.

Focus: maintain fitness, remain physically sharp and mentally stable.

Nutrition:

carbohydrates are essential before competition (classic pre-match “pasta party”). Otherwise, maintain a balanced diet with plenty of fruit and vegetables. Skip cola and sodas, opt for juices instead.

Note:

peak performance can only be maintained for 2–3 weeks. With careful planning of rest breaks, it can be stretched slightly.

Regeneration Phase

Between season cycles, and at least once per season, an active recovery period must be built in. Stress is reduced to a minimum. Weapons are set aside, and athletes turn to other sports.

During this phase there is no training and no competition. A healthy diet should continue.

Adjustments

Season planning is not rigid. It must adapt to unexpected factors such as illness, training delays, or schedule changes. Best practice: update the season plan regularly, note changes after consulting the coach, and then adjust training accordingly.

Season Planning

Step 1:

Create a list of all competitions in the season, including their dates and duration.

Step 2:

Determine the most important competitions of the year.

In which periods is peak performance required?

Which sporting events are the most significant?

When must peak form be reached?

Step 3:

Depending on need, plan one or two annual training cycles.

Step 4:

Break the training cycles down into training stages.

The starting point of planning is always the competition, where peak form must be reached.

(See chart.)

It must be emphasized that high-performance athletes need to align their entire lifestyle with their sport. This is what sets them apart from hobby fencers.

The decision to pursue competitive sport requires a deep break from previous habits.

Anyone unwilling to make that change should continue fencing as a hobby.

	Preparation	2-4 Weeks	Strengthening of cardiovascular system and muscular endurance. Long distances, light weights, many repetitions.
	Strength Training	3-5 Weeks	Building the muscles important for fencing. Strengthening under-developed muscle groups. No competitions.
	IK Training (Intramuscular Coordination)	2-3 Weeks	Hardening and stabilizing the muscles as preparation for explosive strength training.
	Speed	2-4 Weeks	Development of explosive power. Training close to competition conditions. Develop rituals and strengths. Participation in competitions.
	Competition Phase	2-4 Weeks	Explosive strength reaches optimal levels. Plenty of sleep, maintain fitness. Training is short but highly intense.
	Recovery	2-4 Weeks	No fencing, no training, no competitions. Maintain fitness with other sports. Relax, take vacation.

Note:

Sports officials should ensure that all competitions are scheduled before the start of the season and coordinated with international tournaments. If this is not done, neither athletes nor coaches can prepare properly, which will lead to poor results.

For fencers with fully developed musculature, the muscle-building phase can be shortened. Too much muscle consumes additional oxygen, which will be lacking in competition.

Warm-up and Cool-down

I know a fencer who showed up at the hall just 15 minutes before a championship match.

He got changed and... lost.

When asked why he was late, he said he had spent the night at a girlfriend's place and simply didn't wake up in time.

I told the athlete that when boarding a train, you first put the suitcase in the luggage rack and then your hat, not the other way around.

With sport and sex, the order is just as important.

I'm not here to judge the topic of sex and sports, but "warming up" in bed is counterproductive, mainly because it increases blood flow to the wrong parts of the body for competition.

And warming up with Tiger Balm, as I once witnessed at a veteran tournament in Thailand, probably doesn't help much either.

Starting a competition without warming up properly is something you only see at the amateur level.

There are countless guides for warming up before training or competition. Just like a car engine, muscles need to be brought up to operating temperature before starting. In fencing, this is combined with technical drills, where athletes may even push briefly to their performance limit. The final minutes of the warm-up focus the mind on the coming fight.

For high-performance athletes, the cool-down is just as essential. It's the counterpart to the warm-up and marks the close of training.

Cooling down shortens recovery time by improving blood circulation in the muscles that were stressed. This helps flush out metabolic byproducts and stimulates the muscles to absorb nutrients for repair and growth.

In this way, the cool-down already sets the stage for the next day's training or competition. Massage and/or sauna can further enhance the effect.

On a larger scale, within the framework of periodization, multi-week regeneration phases serve as a "big cool-down." They allow the body to fully rest and recharge, ensuring maximum performance when training resumes.

Strategy and tactics

Willi became Junior World Champion twice, once with the German team, and once individually.

Strategy and tactics shifted in each case.

1998

In Valencia, Venezuela, coach Mehl pushed his protégé to the absolute limit during preparation.

Running up to the 17th floor of the Stauffer Hotel to train in the "torture chamber" of a shut-down dining hall was just the warm-up.

Inside: parry–riposte, step–lunge, attack, counterattack. Push-ups, squat jumps, drills until collapse. Pulse at 200.

"Right now I'd love to crack Mehl over the back with my saber," Willi gasped.

Pause. Then everything again from the top.

One day before the tournament: regeneration. Then came the fight for the individual world title.

Opponent: Alexei Frossine. After a balanced bout, the Russian pulled ahead and claimed victory.

But in the team match against the heavily favored Russians, the two met again. When Kothny stepped in, the score stood 40:37 for Russia, and Frossine scored the next hit. Only four touches to go.

It looked over.

Frossine attacked, drove Willi to the end of the strip, and unleashed a flank cut. In a hopeless position, Willi parried and riposted, a huge point. The momentum flipped. He rallied to 44:43, then landed the final hit for the win. The path to the world title was open.

In the final against Hungary, Germany was behind. Kothny stepped in, turned the fight around, and carried the team to the world championship.

The german's national anthem starts and ends.

1999

Before the World Championships in Keszthely, Hungary, a Slovenian coach observed Willi in training and said: "Willi will be world champion."

And so it was. In the final, Hungary's Tamás Decsi never stood a chance.

The german's national anthem starts and ends.

Then came the team match. As anchor, Germany's No. 1 junior, Willi Kothny. Carried a clear lead against France's Nourdin Marouf. He only had to close it out. But Marouf clawed back, point by point, until it was 44:44.

"Prêts? Allez!" Kothny pressed forward, launched an attack, missed. Marouf countered. Willi parried,

leapt into his signature Mungo jump, too hastily. Marouf struck with a parry-riposte. France snatched the title.

Later, the national coach analyzed:

"When Willi fences individually, he takes full risks, and wins. As anchor in team matches, he hesitates a fraction too long. Responsibility makes him hold back. But in fencing, a hundredth of a second decides between victory and defeat."

Soon after, in Seoul, Korea, came the Olympic qualification for Sydney 2000. Again Germany faced Hungary. This time, Willi fenced as middle fighter. Without the final burden, he unleashed his risky, aggressive style. He took over at 30:24 down, and handed off with a 3-point lead.

The road to the Sydney Olympics was open.

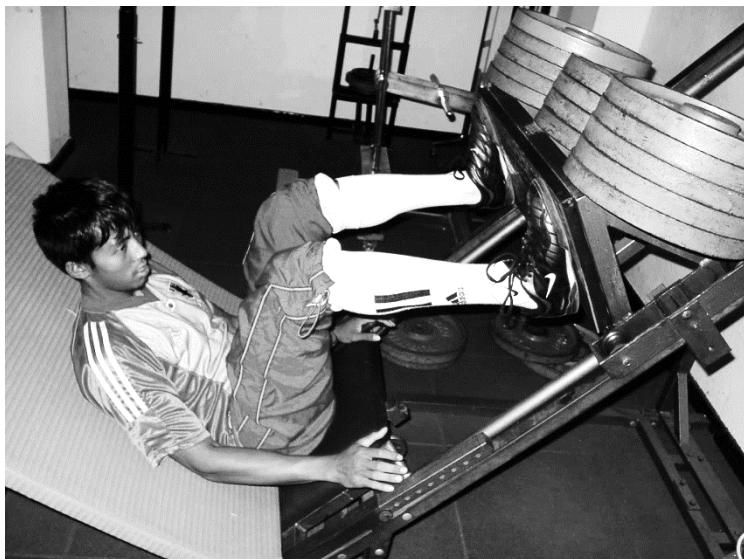

Through his brutal physical training, Willi built a personal strategy unlike most fencers. Others relied on tricks and feints to outsmart opponents. Not Willi.

His tactic: superior endurance.

He chased rivals up and down the strip until they burned out, then struck.

The bout with Stahlschmitt proved it: "At first I managed well, but then I lost concentration."

That was Willi's edge: decisive hits came not at the start, but at the end of bouts. Add to that his explosive speed, and few could resist.

Mehl's fencers trained with leg presses up to 500 kg. At the World Championships in Korea, the machine didn't go that high, so they simply added a Korean as extra weight.

Note: Training with extreme weights can be dangerous. Safer alternatives, like resistance bands, can protect the joints.

Physio

"He has zero regard for his athletes!" grumbled physiotherapist Detlef Haverkamp every time he put Willi on the treatment table. "These muscles are completely locked up!"

And Willi would howl as Haverkamp pressed his wooden tool deep into the calf muscles, scraping the tissue to free the blood flow.

This was one of Eberhard Mehl's biggest shortcomings: he placed almost no importance on recovery. Anyone who needed Detlef's therapy had to pay out of their own pocket, there was no budget for physiotherapy in the club at all.

How vital proper physio is became clear through the work of Raymond Valk at FC Tauberbischofsheim and with the national fencing team. More than almost anyone, he could not only heal the body, he could strengthen the mind.

He played a decisive role in Dennis Bauer's success at the 1997 World Fencing Championships in Tenerife. During treatment for a muscle issue mid-competition, Valk didn't just fix the muscle, he mentally re-armed the fencer for battle.

And Dennis Bauer became world champion.
Thanks to Raymond Valk.

Motivation

Physical condition and mental state often go hand in hand, yet the psychological side is all too often neglected.

And it isn't always the coach who provides the spark an athlete needs to win. That became clear during a World Cup match between Willi and the Italian fencer Marco Danero.

Willi fell behind quickly. Eberhard Mehl sat speechless in the coaching area beside the piste, utterly frustrated. The match looked lost.

I jumped up and rushed to find Erhard Bauer: "Erhard, come quickly, Willi is losing!"

Dennis's father hurried over with a loud "Hopp! Hopp!" And that alone was enough to flip the momentum and turn the fight around.

Team captain Matthias Behr had the same gift. The former Olympic champion had hands that felt as big as toilet lids. When he clapped them together, a deep, thunderous PLOPP PLOPP echoed across the entire hall, drowning out every other sound.

It was a magical Plopp Plopp sending one clear message to the athlete: "You're not alone."

A Plopp Plopp far more powerful than any coach wildly gesturing at the side of the piste.

Fortune

I have given luck its own section, because it is indispensable for a successful career.

“Does he also have fortune?” Napoleon Bonaparte would always ask when he wanted to assess the capabilities of an officer.

“A general must have fortune,” demanded the French emperor and warlord. He knew that it was not enough for a commander to be a brave warrior and a skilled strategist. To succeed, he also needed luck.

You can't train luck, but you can work toward it. Through skill, confidence, and a positive mindset, you can encourage fortune to be on your side.

It is no coincidence that the most successful German soccer team is nicknamed “Lucky Bayern.”

Why? Because only through hard work, effort, and ability do they get the ball into a position where luck can intervene.

So, it is not luck alone that leads to success. Sweat and willpower are part of it.

And that can be trained.

The same goes for fighters on the piste. Along with tactics, technique, and athleticism, they also need that little touch of luck to succeed.

Example: Sydney Olympics, September 21, 2000

The gladiators march in for the round of 16 in men's saber. Willi Kothny against Sergei Charikov, the world number three at the time. For the German, it seemed like a certain defeat. The experts all agreed.

What no one thought possible: up to 13:13, the fencer from Koblenz kept the match wide open. Then, the old mistake, Willi rushed, his attack fell short. Charikov countered and took the lead at 14:13. The Russian needed just one more point to win.

But Willi equalized with a lightning counterattack: 14:14. The next touch would decide who advanced to the final eight.

"Does Willi also have fortune?" Napoleon might have asked.

He did. Both fencers charged at each other. Willi slipped, causing Charikov's attack to fall short, and Kothny landed the decisive hit. The way to the medal rounds was suddenly open.

Had that slip not happened, had the Russian reached his target a moment earlier, it would have been Charikov fighting for a medal, not Kothny.

The result is well known: Willi Kothny won Olympic bronze. He had skill and fortune.

Of course, luck isn't everything. But it is the finishing touch the i-dot, on sporting achievement. You can't train it, but it only comes to those who earn it. Fearful or hesitant fencers never get far enough for fortune to lend its helping hand.

Even the Christian reformer Martin Luther knew this, when he said:

"From a timid ass, no merry fart will come."

Life itself is a struggle, and even that struggle is accompanied by luck, or not. But in life's battle, one must seize fortune and build upon it.

Luck with Willi

Bringing Willi to Germany required not only energy but also luck.

After my reporting trip, when I flew to Thailand again, it was clear: Willi should come with me.

In Stuttgart, I booked an additional ticket for Willi and his mother on my return flight, and paid for it.

The ticket was supposed to be picked up at EgyptAir in Bangkok.

Three days before departure, I went there, and was shocked. EgyptAir had no ticket. I had been scammed. They told me I would have to buy a new one. But I had no more cash, only a check. The airline refused it, saying the amount was too high. The German embassy would have to guarantee coverage.

So I went to the German embassy. There, I literally stumbled into an officer whose rank insignia was falling off his jacket.

"Lieutenant Colonel, you're losing your rank," I joked, pointing it out, then introduced myself as a major and explained my problem.

His nameplate read "von Braunmühl." I mentioned that in my barracks in Stuttgart there was also a Dr. von Braunmühl. I told him about my comrade.

"Come with me," he said, leading me into his office. He stamped the check with the embassy's guarantee seal. We were cleared to fly.

What if that child from the tin hut by the River Kwai hadn't been able to come?

No one knows. But Willi had this stroke of fortune, and he seized it, and built upon it. And how.

The Clinging Child

When I returned to Thailand a year after the adoption, something miraculous happened:
As we got off the plane in Bangkok, the boy clung tightly to my thigh, as if afraid he might have to go back to Thailand.

He didn't, but at four and a half years old, he couldn't understand that. So he held onto me, to be absolutely sure. For a whole month. I couldn't walk alone, couldn't eat alone, couldn't sleep alone, not even go to the bathroom alone.

Only when we boarded the return flight did his grip loosen. Then, he embraced the fortune of his "rescue", as reporter Stefan Keber put it, and developed it, until he became one of the top three saber fencers of his era.

Napoleon would have been proud of him.

Section 4

In Focus

Systems

To understand how systems work, let me take you back to my past.

Hamburg, 1975

The Bundeswehr had assigned me as an intern to the German Press Agency (dpa) to refine my journalistic skills. (Appendix 1)

That autumn, a massive wildfire swept across the Lüneburg Heath. It was the big story of the season. The dpa's Northern bureau sent me on-site to add human-centered reports to the dry updates coming from the operations center.

But something strange happened. On the ground, I saw the fires being brought under control. Yet, in the bulletins from Norddeutscher Rundfunk (NDR), which I monitored, the inferno seemed to be spreading.

My reports weren't reflected in the news. Frustrated, I boarded a Bundeswehr helicopter to confirm what I already knew: most of the flames were contained. But on NDR, the fire was just beginning.

Angry, I added a personal note to the end of one of my dispatches:

> "You may criticize my style, but not the truth of my report. As a Bundeswehr major, I'm trained to assess a situation, and my assessment is that most of the fire fronts are under control."

Shortly after, an NDR camera team arrived. I watched as their reporter chatted with soldiers, who then piled up branches, poured gasoline over them, and set them alight. The cameraman filmed.

That evening, the footage ran on TV, alongside the operations map showing the heath engulfed in flames.

I was stunned.

Furious, I stormed into the editor-in-chief's office and vented my outrage.

What went wrong?

The system itself had failed. Every reported fire had been marked on the operations map. But once a fire was put out, its symbol wasn't removed. On paper, the blaze was still growing.

The Tagesschau needed pictures, and the reporter had to deliver, so he delivered. Sensational coverage took on a life of its own, drifting further and further from reality.

No "Big Brother" was needed, the system generated its own momentum. And I, a lone intern, was left standing in the Lüneburg Heath, shouting into the wind.

On a larger scale, it works the same way: the mainstream dominates, and the individual voice, no matter how accurate, goes unheard.

At least in the 1970s, there was still room for reflection. A week later, the editor-in-chief gathered

the staff, explained the error, and apologized to me. As compensation, I received a bonus of 300 Deutschmarks. I had resisted the system.

Later, when I traded my pistol for a typewriter and became a journalist at Südwestrundfunk, I held on to that independence.

I'll admit, I had an advantage. With my Bundeswehr pension supplementing my fees, I wasn't financially forced to "dance to the tune" of any newsroom. And because my work was valued, editors couldn't easily dismiss me.

That freedom even allowed me to choose my editors. It wasn't always about conflict, it was also about creative fit. Take Rolf van Lessen: his editorial style simply didn't align with mine. I told him so openly. We remained friends, but I found a team that appreciated my way of making films. I was no longer a "little sausage" stranded in the heath.

Most journalists don't have that luxury. Dependent on every paycheck, they bend to the system if they want to survive.

The Referee

In fencing, the judge is called the referee. His task is to enforce the rules and decide on the validity of actions and touches.

After his active career, Willi Kothny told the Koblenzer Rhine Newspaper how he wrestled with the decision to serve as referee at the 2024 Paralympics in Paris. The role, he said, was both an honor and a burden.

"This summer, I'll be a referee at the Paralympics in Paris," Kothny said. He admitted it took him ten days to give the federation his answer. "I know from my own experience how decisive a referee's call can be. One wrong decision can crush someone's dream of a medal."

Personal note.

In this chapter, I describe events that cannot always be proven. Some are based on private conversations; others reconstructed from circumstances that may have unfolded differently.

At a Junior World Cup in Budapest, I once filmed Hungarian referee Peter Erdei lighting a cigarette in the middle of a bout. When I made it public, both Willi and the German team had lost all favor with him.

At the Olympic Games, in the match for a spot in the final, the referee's influence was decisive.

The magazine Fechtsport later quoted coach Eberhard Mehl, who called the officiating a "disgrace." In the 44:45 loss against France, he criticized the referee, who overturned two touches, handed out two yellow cards and one red, and in doing so robbed the Germans of victory after leading 44:42.

Skeptics might doubt Fechtsport's objectivity, refereeing decisions are open to interpretation, and a coach's view is inevitably subjective.

But in Korea, where Willi fought for the Asian Championship, the story was harder to dismiss. Conspiracy theory or coordinated action? The Korean

federation and a Hungarian referee appeared to work hand-in-hand to block Kothny from winning the title.

Here are the facts:

Before his semifinal, the organizers abruptly moved lunch forward. Officials, press, and the FIE president left for the dining hall. Once the venue had emptied, Willi was ordered back onto the piste. The match would take place, before empty stands.

He lost to blatant miscalls. At the peak of absurdity, when the Thai coach pointed out that the clock had stopped running, he was shown the black card and expelled.

After the bout, the Korean winner packed up quietly and left, without celebrating. He had reason to celebrate, at the time, Willi was considered the best sabreur in Asia.

At least the scandal reached FIE president René Roch, who ensured that referee was never again appointed. But the damage was done: the title was gone.

Willi also knew the other side of fortune. In Budapest, while breaking into the world's top ten, he scored his final hit against world no. 1 Stanislav Pozdniakov with a diving "mungo jump." He fell in the process, normally, a fall invalidates the touch.

The ruling was disputed, but Kothny's win stood, and from then on he was among the world's elite sabreurs.

That case might have ended there, if not for what followed. After the match, a colleague of the referee approached me and asked whether I might "show some appreciation" for his colleague's decision. I invited him to bring the matter before the technical committee, where it belonged.

Years later, the ARD Sportschau reported a scandal that echoed my Budapest experience.

Referee Marcus Schulz recalled being approached by a well-connected coach at the 2024 Olympics:

"Marcus, we need to talk," he said. In the hotel room he asked, 'Would you accept a little advantage?' I said, 'For what?' He replied: 'For this fencer, we'd give you €5,000.'

My answer was clear: 'Absolutely not.'

His response: 'Don't be naïve. You think being a good boy will get you anywhere? You'll never make it to the top if you don't play along.'

I couldn't help but think back to Budapest.

Former referee Joachim Wargalla later confirmed in the ARD documentary:

"The rules have become so complex, they're wide open to interpretation. That makes them exploitable, and referees manipulable."

The only real protection against manipulation, he said, is to avoid simultaneous attacks and go for single hits. But that is extremely hard, even for top fencers.

Dennis Bauer mastered it almost perfectly. His specialty was the arm thrust: when the opponent extends to attack, you stop short, hit his arm, then spring back. Simple in theory, brutally hard in practice.

Sport and Politics

No matter the discipline, athletes enjoy high respect among the people. Rightly so. Sport is a return to nature. And nature knows no mercy, no pity.

Its law is brutal: the strong prevail, the weak are left behind. Whoever triumphs in this arena becomes a hero.

Systems understand this. They seize the heroes, bask in their glow, hitch them to their wagons.

Athletes accept it willingly, it brings them money, status, admiration.
But dependence follows.

The days when ancient Greece paused its wars so athletes could fight naked, free of sponsorships are long gone.

Competitors have become figureheads of ideology. National Socialism and socialism were the peaks of totalitarian misuse.

Today, the abuse is quieter: athletes turned into walking billboards, bought with money, enslaved to economic or political interests.

I know from experience: sport is expensive. Special diets, equipment, competitions across the globe, not every club can pay. The call for sponsors is loud.

In West Germany, "Sporthilfe" once tried to soften this dependence. But against the millions athletes earn today, the effort collapsed.

Politics too has learned to harness athletes. An AI analysis spells it out:

"Sport and politics are closely intertwined, influencing each other. Politicians use sporting events for self-promotion or distraction, while clubs and associations are shaped by political funding and laws."

Politics turns sport into a tool. Olympic Games, World Cups, politicians climb on stage, polish their image, distract from scandal.

Even AI is already indoctrinated. Google claims:

"Initiatives like Sport and Politics United Against Right-Wing Extremism show that sport and politics can also stand together for fairness, respect, and human dignity."

Had the AI not quietly dropped the word right-wing, the statement would ring true. Because threats don't come from the right alone.

Design: Erik Kothay
PHOTOGRAPHER

Fencers know how to defend against attacks from the right.

They also know how to parry from the left, or from above, when religion fuels the strike.

Fencers know how to defend themselves against attacks from the right, but they also know how to block attacks from the left, or even from above (those driven by religion).

Anyone who only pays attention to one side will be caught off guard by the other.

Even Bruce Lee warned of this, and Somkhit made it his guiding principle:

"Unexpected moves are the hardest to counter."

Politics, however, prefers to offer sweet words:

"From the attack on the left," they hope,
"We shall not be struck."

A coach who worked that way wouldn't have a job for long, and I've yet to meet one who does.

But politics goes even further. With charming rhetoric, it makes "the promotion of democracy" sound appealing, and naïve athletes fall for it.

Yet sport has nothing to do with democracy. Sport exists just as well in dictatorships. It's about measuring an athlete's performance, showing respect for one's opponent, and practicing fair play. No politics are required for that, it's inherent to the very nature of sport.

The true idea behind sport is to bring people closer together. That's how understanding between nations is built.

Football coach Rudi Gutendorf demonstrated this in Rwanda:

He placed players from both the Hutu and Tutsi tribes side by side on the national team. Sport united the footballers of two warring peoples.

No ideology was needed, sport alone was enough.

Stains on White Vests

Let's revisit the issue of bribery among referees and look closer, because it doesn't stop there, it runs through the system, reaching even the highest levels of sports administration.

We know that fencers wear white vests, and on white, every stain shows. I don't want anyone to believe that fencing is drowning in corruption. There are far too many volunteers who dedicate themselves selflessly to this sport. And it is precisely those honorable fencers who must care that the white vests stay white.

I cannot prove what I'm about to say, since the conversation took place behind closed doors. But as a journalist, I stand by its truth.

It happened during the election of a new FIE president. A senior fencing official approached me and said that one of the presidential candidates wished to promote fencing in Thailand. He asked me to whom such support should be directed.

As a general once explained to me, in Thailand corruption is considered part of the culture, not a moral failing. Accepting such funds is not unusual.

I told him there was only one person in Thailand I knew who would actually use that money to promote the sport:
Willi Kothny.

That ended the conversation.

Whether money ever changed hands, and whether the new FIE president was ultimately elected with the Thai delegate's vote, I cannot say, the election was secret.

Fencers themselves usually have no say in such shady dealings. But they can, at the very least, keep a skeptical eye on their consequences.

I remember one case after a continental tournament: suddenly, a sport director was driving two new cars. He was the man who handled business with the equipment supplier.

It would be cynical to suggest that funds had been siphoned off, but two active fencers did have the courage to ask him directly how he could afford two new cars so soon after the event.

He replied that he had inherited them from his aunt. Shortly afterward, he resigned from his position.

Coincidences do happen.

Transgender

Pattaya. Walking Street. Blue Hawaii.

I'd be lying if I said striptease never appealed to me.

When I pushed open the door to Blue Hawaii, the melody of *Je t'aime* wrapped around me. In a golden cage, moving with the rhythm, clung a being of breathtaking beauty to the bars.

Wow.

Our eyes met, locked. Caught in each other's presence. A cocktail at the bar took care of the rest.

The dancer called herself Ann, from Chiang Mai. We were so drawn to each other that we met daily after that, outside of Blue Hawaii as well.

Ann came home with me. I traveled with her to Chiang Mai. I was fascinated by her, and she, I think, by me.

Only later did I learn: despite her strikingly feminine presence, Ann was biologically male. Transgender. I hadn't noticed. After all, you don't grope a new acquaintance straight away.

We stayed close friends until Ann got married and moved to Switzerland with her husband. Even today,

furniture I bought in Chiang Mai reminds me of that shared past.

Why do I mention this?

Because today, transgender issues dominate headlines in sport and politics. And no one can say I don't know what I'm talking about.

My transgender friend was biologically male with the soul of a woman. He felt as a woman, perceived as a woman, reacted as a woman.

But we also know that men and women differ physically, with different hormonal balances. And biologically, men hold an advantage. Proof? Year after year, friendly matches between the German women's national football team and DFB boys' youth teams, and the women always come up short.

Now politics steps in, together with certain sports officials, and in the name of tolerance allows biological men to compete in women's sports.

That may be tolerant toward transgender athletes, but in practice, it causes disadvantages to biological women.

Politically charged federations, including the IOC, even promote it.

When American fencer Stephanie Turner refused to compete against trans woman Redmond Sullivan, she was disqualified by "USA Fencing." According to the rules, technically correct, since you cannot boycott an opponent who has been admitted to competition (Rule t.113-17). But Turner had exposed an open wound.

She defied the system, yet remained personally respectful:

"I feel great love and respect for you, but I will not compete against you."

And so the debate was ignited.

Say what you will about the queer movement, it has no place in sport.

Footballer Manuel Neuer, and not only him, has sometimes led his team wearing a rainbow captain's armband.

I asked AI about the meaning of the captain's armband. The answer:

"In sport, especially football, hockey, and other team games, the armband symbolizes leadership and responsibility.

- Leadership: it marks the captain's role within the team.
- Responsibility: the captain makes decisions to support the team.
- Communication: the captain acts as a link between players, coach, and referee."

The band's function is simple: it shows who the captain is.

But then politics steps in. It hijacks a functional symbol and loads it with ideology.

The problem could be solved with one sentence of rule change:

"The captain wears a white armband with a black C."

Period. End of story.

But politicians and officials don't want that. They want the indoctrination.

My proposal to the German Football Association went unanswered, as did my letter to IOC president Thomas Bach. (Appendix 3)

The peak of the transgender debate lies outside of sport, but sport is the platform that amplifies it.

When biological men are allowed into women's competitions, the next step is an official form where, under "mother," you can tick male or female.
Oxygen deficit?

Contradiction

Before I begin this chapter, I must say a word about Norbert.

Norbert was the owner of the restaurant Nachtcafé in Pattaya. My daughter Manuela had invited me there for dinner, along with her mother.

As it happened, a few friends of mine also joined. When it came time to pay, I couldn't very well let my daughter handle the bill. I asked Norbert to settle it and handed him my Mastercard.

"Sorry, Erik," he said, "I don't accept credit cards or mobile payments."

I was surprised. Norbert explained to me that this method leads us to the threshold of total surveillance. What is sold to citizens today as a measure against money laundering and terrorism is gradually being expanded until the system can monitor people entirely: The system knows where you are, the system knows your preferences, the system knows what you plan to do in the future, the system restricts your freedom of movement by refusing payments you wish to make outside your designated area. You cannot refuel your car because the system blocks your card.

I became friends with Norbert. He wrote the foreword to this book and found moving words.

My accident not only shattered my elbow but also affected my head. The helmet split from the force of hitting the concrete. Without it, my earthly existence would have been over.

Along with the shattered elbow, another handicap came: my brain no longer works as it once did. I have forgotten, among other things, the name of my former editor-in-chief, the first name of my production manager, the name of the Brazilian samba dancer from Ochtendung, and so on, and so on.

Since I feared that I might also write nonsense in this book, I asked Norbert to read some passages and point out any rubbish.

So I gave him the chapter Fight. In it, I tried to capture the difference between the life-and-death battle of the ancient Achilles and the athletic fight of my son at the Olympics.

I chose the hexameter verse form for Achilles' battle, and for Willi's fight, a sober, emotionless listing of a modern athletic contest.

Norbert's response:

"The blood-battle of Troy is indeed heavy fare."

Okay. That was, of course, the point, to use this ancient verse form to highlight the contrast between the original life-or-death struggle and the derived sporting contest.

But then Norbert, in a sense, contradicted my explanation by bringing the topic back to the core of the title You Must Fight Alone.

"Hello Erik,

I see the athlete's fight more as a struggle with oneself, a confrontation with one's own limits, fears, and inner weakness.

It is about overcoming oneself, proving mental strength, and bringing out the best within. It is a fight for perfection, discipline, and personal development, even if competitors and opponents play a role.

This fight takes place within rules and is directed toward athletic performance, not the destruction of the opponent.

It is a constructive struggle that brings growth and progress, even though it is hard and exhausting."

Contradiction accepted.

Norbert reaffirmed in a closing remark:

"Victory is not achieved solely through strength, but through the unshakable spirit of those who refuse to give up, even when the odds are against them."

Abuse

Despots are interchangeable:

-Adolf Hitler
-Josef Stalin
-Ayatollah
Khomeini

Fencing World Cup 1999 in Tehran

More than 100 fencers from 20 nations had come to Tehran to collect World Cup points. The competition was particularly important because the results counted toward qualification for the 2000 Olympics.

The day before the tournament, the Iranian Fencing Federation invited the athletes on a sightseeing tour of the city.

Of course, no one wanted to miss the opportunity to get a glimpse of this closed-off country outside the fencing hall. Almost all the athletes agreed to join.

The first stop for the bus was the Holy Shrine on the outskirts of the Iranian capital.

The fencers were led from the parking lot to the mosque. There, they received instructions on how to behave in a Muslim place of worship.

The athletes followed the instructions meticulously, eager not to offend the religious feelings of their hosts. Shoes off, wash your feet, enter the mosque with the right foot. (The left is considered impure and used for the first step into a toilet.)

Just beyond the entrance, we were asked to line up. A mullah informed us that in this mosque lies Ayatollah Khomeini, leader of the Islamic Revolution and founder of the state, in his final resting place.

Before the group began to move, soldiers stepped forward carrying a wreath. We were told to follow them.

Cameras from Iranian television whirred. So did mine.⁵⁾

At the grave of the deceased, the wreath was laid down. The soldiers saluted, the fencers stood at attention, and all observed a minute of silence.

Later, in Iranian TV broadcasts and the newspapers the next day, the true purpose of the sightseeing tour became clear.

Fencers from 20 nations, it was reported, had paid tribute to the Ayatollah on his birthday the previous day.

The next day, Khomeini was invoked to bless the tournament. It was dedicated to him. The late religious and political leader of the Islamic Republic was omnipresent in banners and imagery around the arena.

Before the first strike was made, an official interrupted the athletes' warm-up with a wailing recitation of surahs from the Qur'an.

A glaring example of how athletes can be exploited by political or religious authorities, without any means of resistance.

My report about this abuse of sport was discarded by all German media in the name of tolerance.

Let us shift, in thought, to a Christian country and imagine this: at the opening ceremony of the Olympics, the athletes would have to march behind a monstrance to the sound of Kyrie eleison...

Plaything

The athlete is not only a plaything of politicians and ideologues but also of sports officials.

Of course, as an individual, he is embedded in a sports system from which it is extremely difficult to break free. He cannot practice his sport alone; he needs the community, the club, the federation, the society.

As long as he functions obediently within the system, everything runs smoothly. But beware if he doesn't play along. There are many examples of athletes being sanctioned when they refuse to follow political directives, for instance, wearing rainbow colors on their jerseys.

Even in Willi's case, the empire of the German Fencing Federation struck back when he decided to go his own way and refused to dance to the tune of the sports director.

It had been agreed between my sons and me that they would receive their education and training in Germany, and afterward return to their country of birth. There, the know-how they had acquired in Europe was to be put into practice.

After finishing high school, Willi received a scholarship offer from Bangkok International

University. He accepted. But the German Fencing Federation had something against it.

At no point did Willi intend to leave the German Fencing Federation. He was willing to attend all the qualifying tournaments (Q-Turniere) of the DFeB. But he lacked the funds. His request for travel cost reimbursement was denied.

Before the qualifying tournament in Bonn even ended, Willi was pressured by the then sports director and head coach to reject the Thai offer and stay in Germany. But Willi refused.

Olympic champion and team leader Matthias Behr intervened, promising to find a sponsor to cover travel expenses. But neither the head coach nor the sports director would accept that. I had warned them not to back Willi into a corner, because I knew his reaction: pressure only strengthens his resistance.

The former model athlete was expelled from the German national team. An absurd move, since the top three fencers in the German rankings automatically qualify for the national team.

And Willi was number one.

After being expelled, Willi transferred to the Amateur Fencing Association of Thailand (AFAT).

The German federation responded with a three-year ban, practically the end for any professional athlete.

However, the International Fencing Federation (FIE) lifted the ban after we used a technicality in the statutes to get around the rules.

For German sports, the fencer Kothny had become useless. He was turned into a competitor, even an enemy.

Due to the lack of training partners in Thailand, Willi relied on maintaining contact with German fencers and coaches.

Some sports officials obstructed this. The most extreme case: when Willi wanted to join a training camp in Germany with the Chinese national team, the event organizer was forbidden by the German Fencing Federation to grant the former German Olympic fencer access.

A kind of precursor to political firewalls today. The result is identical in both cases. Christian Bauer, the French national coach of the Chinese national team, put it this way, shaking his head:

"If you lock others out, you lock yourself in."

The Hungarian coach Gábor Körmöczi, who offered to train the former Koblenz fencer in his free time, was threatened by the regional sports association with termination of his contract.

To be fair, not everyone followed the orders of the DFeB. A glimmer of hope: Olaf Kawald from Dormagen defied them and allowed Willi to train at his club, a decision that ultimately benefited the club. Dormagen soon replaced Tauberbischofsheim as the premier hub of sabre fencing.

But even in his new federation, Willi became a plaything of officials.

Despite written agreements, the authorities did not honor them. They exploited the fame of the world-class fencer for their own image promotion but avoided providing the necessary and contractually promised support.

What remained was a retreat into an international school (NIST), where the two brothers passed on their expertise to elite students.

By that point, I could have leaned back and looked proudly at my life's work: two children from the slums serving as instructors at an elite school, a remarkable rise.

But that was never the real goal, neither for me nor for my sons. From the beginning, our mission was to enable other underprivileged children to experience the same ascent. A fencing center was meant to make this possible.

The land had been purchased, contacts with other schools had been established. But before the project could begin, COVID intervened. The new schools canceled the initiative, and the old school made continued employment dependent on vaccination.

As an individual, you couldn't fight against that. Experiment failed.

If this story were titled "The Hero from the Tin Hut," one could end it here. Even Achilles met his end through a poisoned arrow, and still became a hero.

But the book "You Must Fight Alone" has not yet reached its dramatic conclusion.
The fight continues.

It is the fight against all odds, the fight beyond the fencing piste, against vain officials, greedy sponsors, and political entanglements...

Michael Zwimpfer

If you google "Michael Zwimpfer", you get the following information:

"Hello, I am your computer specialist, Michael Zwimpfer!

Do you have a problem with your laptop, smartphone, printer, the internet, or any other computer technology?

I'll take care of it."

Not a word indicating that Michael also carries the first name Sarawut, which suggests he has something to do with Thailand. And yes, Michael has a Swiss father and a Thai mother. Like Willi, he is a wanderer between two cultures.

And the two share something else.

If you keep googling, you will also come across the name Michael Zwimpfer on the website of the International Fencing Federation (FIE). You learn that he competes in foil for Thailand, is male, 180 cm tall, weighs 75 kg, and is right-handed.

Under "Results" it is documented that in the years 2005 and 2014 he fluctuated between places 333 and 625 in the world rankings. But rankings were never important to Zwimpfer. It was the participation in these events that mattered.

The fact that he was ever included in the world rankings at all is thanks to an encounter with me. After Willi switched from the German Fencing Federation to the Amateur Fencing Association of Thailand (AFAT), a tall foil fencer caught my eye at fencing tournaments, because of his European appearance.

In conversation, Michael complained that the Thai Fencing Federation did not register him for international tournaments, even though most World Cups were held practically on his Swiss doorstep. In Thailand, he could not take part in any competitions because the distance to Switzerland was too great and therefore too costly. But no one at AFAT cared. I felt sorry for the young man who loved fencing. And I took up the fight against the officials' disregard.

Because of Willi, AFAT had given me the access code for registering athletes for World Cups. And so I nominated Michael without informing the federation. That's how Zwimpfer came to participate in his international competitions. This little trick harmed no one. On the contrary:

Later Zwimpfer moved fully to Thailand, helped build the Chiang Mai Fencing Academy, and became a coach there. A "hobby fencer" who gave fencing in Thailand a new impulse.

NIST 5)

"Khun Willi, could you train my son?" asked Ping Ping's mother one afternoon.

"What happened?" Willi wanted to know.

She explained that she had accompanied her son to the Cadet World Championships in Ljubljana. There, she realized just how far behind the Thai coach was compared to international standards. Ping Ping was eliminated early, and sent straight to the showers.

It wasn't surprising. In Thailand, fencing was a barren landscape, a sport ruled by military men who could barely tell a sabre from a walking stick.

Olympic medalist Willi Kothny and his coach Somkhit Phongyoo had seen this incompetence firsthand after joining the Thai fencing federation. The peak of it came at the Beijing Olympics: (Appendix 6)

A general was appointed team manager but never once appeared at training or competition. Worse still, he couldn't even secure an accreditation for Coach Somkhit, who had traveled at his own expense.

So Willi fully understood Ping Ping's mother's frustration.

But there was a catch.

Ping Ping already belonged to another club, and Willi didn't want to give the impression that he was trying to poach the young athlete, a common practice in the fencing scene, but not one Willi would engage in.

The mother, however, pushed for a solution.
That solution was NIST.

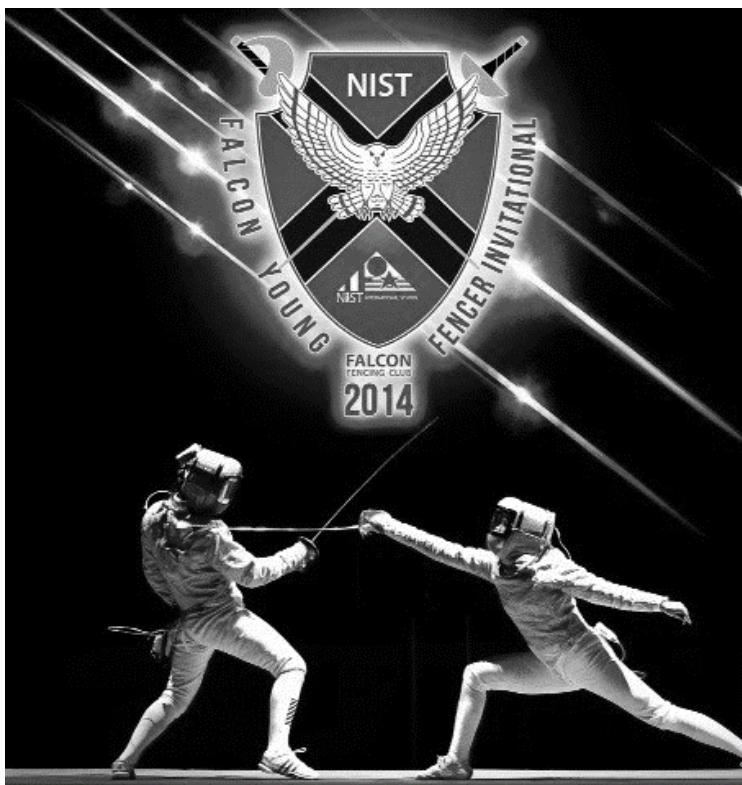

NIST stands for New International School of Thailand, an institution that not only teaches academics but embraces the Latin motto *mens sana in corpore sano* ("a healthy mind in a healthy body"), offering a wide range of sports in its curriculum.

The mother suggested adding fencing to the school's sports program. And so it happened:
NIST founded a fencing club called The Falcons. Willi was appointed manager, Somkhit became the coach, and Ping Ping could train under them, without leaving his original club.

The results came fast. Ping Ping's performance soared, so much that he earned a scholarship at a U.S. university, where he was later coached by Willi's former national teammate, Jacek Huchwajda.

Jacek himself was a model of successful migration: from Poland to Germany, and from Germany to the United States.

Ping Ping's success spread quickly. More and more NIST students took up fencing, and soon they dominated Thailand's sabre scene. The small fencing club evolved into a fencing academy.

NIST, however, was a school for children of privilege, the elite among themselves.

And yet, they too were bound by the system that, after the outbreak of COVID, began to encroach on personal freedom.

This isn't about debating the pros or cons of a gene-based therapy, the one euphemistically marketed as a "vaccine."

It's about how political powers, wherever they came from, enforced global mandates that defied the Nuremberg Code: the prohibition of medical experiments on humans without their consent.

Such actions are classified as crimes against humanity.

Still, NIST's teachers and students were coerced into vaccination. Refusal meant unemployment, or expulsion.

Coercion, pure and simple.

In Germany, footballer Joshua Kimmich made headlines for refusing the injection, citing unknown long-term effects. Bayern Munich, the German Football Federation, and the health minister piled on the pressure until he finally gave in to the system. (Or perhaps received a placebo, who knows?)

For Kimmich, it was about a few million euros.
For my sons, it was about survival.

And with that, we arrive in the present day.

The Tube

I was slowly recovering from my motorcycle accident. My arm, stiff and aching, was beginning to remember its old movements. Morning walks returned, followed by a dive into the pool of my Belgian neighbor, Lou Lou. Things were looking up.

Then one day, I started limping, the hip. A cane helped for a moment, but the next day, the pain was unbearable. By the third day: rien ne va plus. Nothing works anymore. I was confined to bed.

The Bangkok Hospital ambulance rushed me to Dr. Suradej, an orthopedist. X-rays showed nothing. "Into the tube," he said.

An MRI would reveal the truth.

The nurses lifted me onto a narrow table and pressed a rubber ball into my hand. "Squeeze this if you panic," one said. The scan would take an hour.

A masked nurse wrapped a blood pressure cuff around my arm, plugged my ears, and covered them with padded shells. I glanced at the massive white cylinder before me — SIEMENS – Healthineers.

"German engineering," I thought. "Built for the world." Then the hum began.

"ssssssssssss—"

Followed by a rhythm: Tüt, didl-di-düt düt—drums—
dum da da dum.

Pop music tried to drown out the machine's voice.

My mind drifted.

Where am I? What are they doing to me?

Isn't this life itself?

You lie there, helpless, inside a system you can't control.

They distract you with noise while invisible hands dissect you
slice by slice, layer by layer.

"ssss—wumm wumm—rrrrrrt—"

The magnet spins.

It reads your body. bones, tendons, nerves, blood, everything.

What happens to all this data?
Do they use it to heal you?
Or to make money?

I could squeeze the ball, but I don't.
What if pressing it just starts the whole thing again?

Silence.

Then a calm, synthetic voice in German:
'We are now giving you the medicine.'
I feel the cold rush of fluid entering my hand. What is it? What does it do?

"Fifteen more minutes," says the voice.

*

The next day.

Diagnosis: Nothing definitive.

Could be a torn muscle.

Could be a nerve.

Maybe arthritis.

"Come back in two weeks," they say. Maybe the pills will help.

The insurance refuses to pay. My account goes into the red.

And again I think aren't we all inside a giant tube?

Unable to move. Unable to resist.

The state scans us, records our insides, charges us for the privilege and we don't even know what it does with what it finds.

And if the magnets start to wobble, who sets the counterweights?

Who keeps the system balanced?

When they finally pull me out, I wipe away the fog of thought.

A nurse bends over me, lowers her mask, and smiles.
"Khun sabai di mai?" Are you feeling better?

I nod. My eyes catch her nametag: Suwarna. "That's your name?"

I ask. She smiles and nods.

"My name is Erik," I say.

And in that small exchange, I'm reminded even inside the machine, there are still people made of flesh and blood who can smile.

Imbalance

A quick look online reveals: The Bavarian Fencing Association is promoting imbalance. And they're not the only ones.

"The LGBTQ community in Munich launched Pride Weeks on June 14, 2025, under the motto "Liberté Diversité Queerité."*

Until the Pride weekend, the pursuit of freedom, diversity, and self-determination will be the focus of these weeks of events.

As the Bavarian Fencing Association, this topic is important to us because it is closely linked to our core values of fairness, respect, diversity, and team spirit."

And further: "Pride Weeks in Munich are an annual series of events aimed at promoting the rights and visibility of the LGBTQ* community. They traditionally begin with various events and activities that draw attention to the community's concerns and challenges. Christopher Street Day (CSD) on June 28,

2025, with the political parade, is the climax of the celebrations, where demonstrations for equality and against discrimination are held."

Using characteristics that have always been associated with the sport, politically minded officials try to cook up their own ideological soup and misuse fencing symbols to link them to ideological currents.

The Bavarian Fencing Association even openly admits that this is a political issue, calling it a "political parade" and advertising it, as if queer fencers wouldn't find their way to such a parade on their own (which is their right).

Ideologies no longer come along in a gradual march, but rather worm their way into people's brains.

Let me put it bluntly, at its core, it always comes down to the same thing.

There are those who live by the motto 'For the people and the fatherland.' Others rally behind 'Freedom and socialism.' And today, the slogan of the moment is 'Diversity and inclusion.'"

When political officials, depending on the system, impose one of these slogans on their association, they marginalize others who disagree with them.

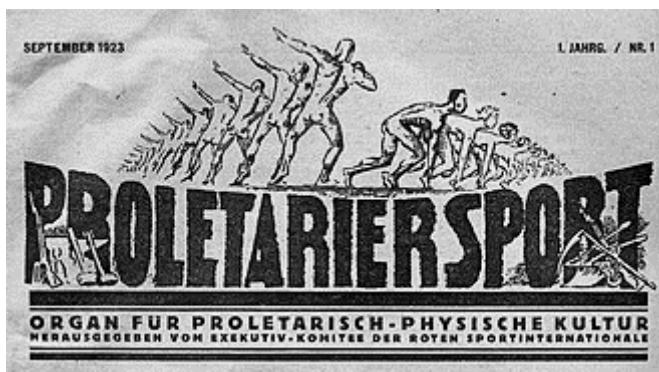

And it is precisely the strength of sport to bring people of different worldviews together and closer together.

In sport, there is room for everyone:

Christians next to Muslims, white next to black, old next to young, rich next to poor, communists next to fascists, gangsters next to police officers.

Sport is the number one factor for integration. People come closer together through shared competition. This is especially true for migrants. However, politicization leaves some feeling excluded.

A focus on the rankings should be more important to an association than on following political trends, because this misses the opportunity to bring about integration through shared sporting encounters.

Today, a movement is spreading from the US to Europe and from there to the world. The Eugene Fencer's Club is a pioneer.

The movement is coming quietly, lulling itself into the world of diversity, fairness, tolerance, and freedom.

This has happened before under different circumstances.

Today, the club (left) displays the German "Sports Greeting," the gender star, on its jersey.

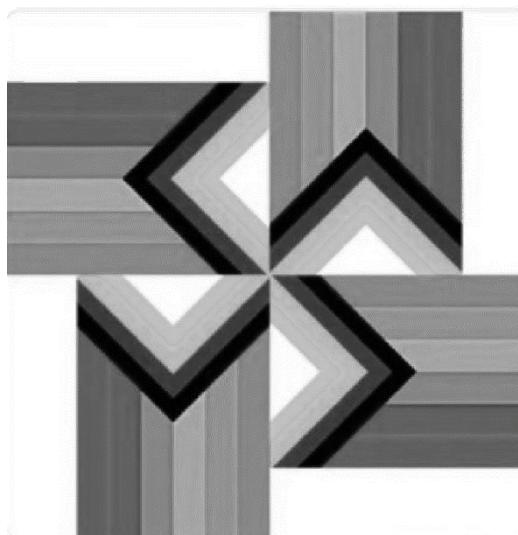

Slogans always had positive connotations in their time.

The abbreviation LGBTIQ stands for the community of lesbian, gay, bisexual, trans, intersex, and queer people. It is therefore a clearly defined group that sees itself as a counterpoint to established society.

The fact that LGBTIQ is not a cosmopolitan organization striving for freedom, diversity, and self-determination became apparent in the German Bundestag at the end of July 2025.¹⁵⁾

At a meeting on cross-hostility, the Green and Left Party parliamentary groups gathered for a parliamentary debate in rainbow colors.

The purpose of a parliament, however, is to discuss all political directions and not to mutate into an advertising platform for an ideology whose lead no one knows.

It took the Nazis four years to bring them into line. And sports were part of it.

"Formula 1, Vettel warned," ran the headline in Motorsport Magazine on August 1, 2012, pointing out the German Formula 1 driver's violation of the rules that require wearing a racing uniform during the national anthem, and that demonstrative display of a Pride shirt during the anthem is prohibited.

Nevertheless, there are athletes who ignore such rules:

Vettel was one of them, along with Valtteri Bottas, Lance Stroll, and Carlos Sainz, who ignored the rule. This quartet also wore their WRAO shirts over their racing uniforms during the Hungarian national anthem.

The drivers were warned by the stewards. As an excuse, they offered that they had "forgotten" to take their shirts off because of the rain that had started to fall.

A good decade later, Max Verstappen reacted differently. By announcing that he would boycott an upcoming "Pride Night of Sport" before a race, he had "sent shockwaves through Formula 1," the press hyped up what was a normal procedure.

The reigning champion declared:
"Motor racing should always be about racing, not politics."

According to some media outlets, this had triggered a "storm of outrage." The fans were divided: some were stunned, others supported the event.

The move sparked one of the "most heated cultural conflicts in sport" and raised questions about identity, values, and the role of athletes in shaping history off the track.

The reigning Formula 1 World Champion made it unequivocally clear: "I'm here for racing. I respect everyone, but I don't believe you can use sport as a platform to promote social movements," he said.

This "culture war" is being fought by just a handful of racing drivers, and that's because Formula 1 has a high advertising impact due to the media coverage. In everyday life, Vettel and his co. don't walk around like parrots.

LGBTIQ emphasizes self-determination, freedom, diversity, and tolerance, fine attributes, but shamefully keeps quiet about the fact that this also includes gender reassignment, including castration, supported by a lobby that even demands this for minors. Above all, the EU. Trans activist groups are also publicly searching for "enemies" online.²¹⁾

What does this have to do with sports?

The European Champion from Thailand ⁶⁾

In 1999, in Bolzano, Italy, two fencers faced each other in the battle for the European Championship: the Italian Luigi Tarantino and the German fencer Willi Kothny. Luigi was the reigning world champion.

"En garde," the referee called, asking both opponents to take their positions.

The hall in Bolzano fell silent. The score was tied at 14:14 between the Italian and the German.

What the audience had witnessed up to that point was pure suspense. The reigning world champion Tarantino seemed certain to win after the first few strikes. But when Willi landed his first hit, making it 4:1, something remarkable happened:

The local spectators began to applaud the German, who originally came from Thailand, and they cheered him on all the way to 14:14.

The atmosphere in the hall reflected the broader mood in the region: the South Tyroleans were supporting a German-born Thai rather than their "countryman" Luigi Tarantino.

Tension filled the air. The next hit would decide who would become the 1999 European Champion.

"Prêt," the referee stretched out his arms.

Both athletes focused intensely, muscles tense, the air electric with anticipation. One could almost feel the moment before release, to whom would that final surge of energy go? The German? Or the Italian?

“Allez,” the referee clapped his hands together.

Before the sound could even reach the upper stands, or so it seemed, Willi lunged forward, covering three and a half meters in a single bound, and struck the decisive hit against the reigning world champion. The arena erupted in cheers.

Wiradech “Willi” Kothny was the Champion.

Luigi Tarantino, according to journalist Egon Theiner writing for his South Tyrolean hometown paper, was so devastated that he “could have hanged himself from the nearest tree.” (Appendix 5)

“The ‘hostility on the piste’ lasts three minutes in sabre fencing, and ends with a handshake once the bout is over.”

And the spectators?

The South Tyrolean crowd cheers for the “German” who comes from Thailand, and carries their resentment toward Italy home with them. Can that be explained rationally?

has found what truly connects in sport.

What use are banners like “Red against Racism” when, after such a bout, racist comments about Willi appear even in Germany on Facebook:

“Get lost, go back where you came from, and take your medal with you. We don’t need it.”

And what do athletes like Luigi and Willi do?

Long after their historic match in Bolzano, they keep meeting at training camps, and with photos like this one, they make a statement against racism.

This is how an international fencing family grows, one that

Ideologies

Playing sports is a very personal decision. Many simply want to get away from everyday life, seeking balance through physical activity, while others see it as "the most beautiful side thing in the world."

And then come the disruptions, uninvited, not on the entry list, and bound by no rules, like a dragon that's been unleashed from its chain.

Every ideology that is carried into sports from the outside is a disturbance, no matter how great the “points of contact” may be or how noble the intentions seem.

My comrade from the Bundeswehr, Uwe Junge, former AfD state chairman of Rhineland-Palatinate, once flippantly referred to the rainbow armband as a “f*ggot band,” which sparked a massive media outrage.

Whether that label was appropriate or not is not the issue here. The fact is that this topic has deeply penetrated sports, sparking heated debates and fueling hate and hostility.

After Muslim elementary school students demanded a ban on the rainbow flag at their school, I went online to collect opinions:

Elfi:

“(Uwe) Junge is absolutely right. My God, if this keeps going, the world will only consist of deviants!!!”

Alex:

“What your army comrade (Uwe Junge) did was not right.”

Manuela:

"Calling this kind of visibility 'political indoctrination' is a common tactic used to delegitimize efforts toward social progress."

Eberhard:

"So what now, should fencers start wearing little skirts to avoid offending the feelings of the gay crowd?"

Alexander:

"In the Soviet Union, we liked to call things by their names. The word 'f*ggot band' could have just as easily come from me."

Elena:

"This incident shows how language can perpetuate harmful stereotypes and contribute to a culture of exclusion.

The rainbow armband stands for diversity and acceptance, and derogatory remarks about it can alienate people who identify with the LGBTQ+ community.

It raises critical questions about the environment in which we play sports — especially in fencing, which should be based on respect and sportsmanship."

6th Battalion (excerpt):

"The use of derogatory terms such as 'f*ggot band' to describe the rainbow symbol is not only disrespectful to the LGBTQ community but also

harmful to the values of inclusion, respect, and dignity, values that should be upheld particularly in institutions such as the military and sports."

The explosive nature of political controversy becomes clear in the dialogue between Markus and Klara:

Markus:

"What a sad life Mr. Junge must lead to hate people who are different from him so much. But you can't expect much intelligence from AfD supporters anyway. They'd gladly send homosexuals, Jews, or other minorities back into the gas chambers, just like their great idol did. Pure human scum."

Klara:

"Your insolent insinuation clearly shows what kind of person you are."

Markus:

"What kind of person one is becomes quite clear when one belongs to, or supports, a party that the German domestic intelligence service has officially classified as right-wing extremist. That's the opposite of patriotism, which means standing on the ground of the constitution.

That's not compatible with either right- or left-wing extremist parties, both aim to overthrow the current system, just like the NSDAP or KPD once did.

And since several AfD leaders have repeatedly made such statements ('should be shot against the wall,' etc.), one can indeed assume that enemies of our democratic order are at work there. Those are the true traitors of the people."

Bernd interjects:

"Uwe Junge, you put your life on the line for Germany in Afghanistan. My respect."

Uta:

"No question about that. The same goes for his efforts during the Ahr Valley floods."

Harald:

"Anyone who feels the need to loudly flaunt their sexual orientation through symbols in public must be able to handle an honest word. The fact that such things are scandalized in Germany is yet another sign of the slide toward a totalitarian state."

And in such an environment, sport is supposed to flourish?

What stands out is that these statements are not only contradictory and often false, but their language also resembles a battle of slogans and empty phrases.

My grandson Morgan finally summed it up:

"When I think of sport, I think of an event that brings together a lot of people from different backgrounds."

We can see that ideology is in the process of taking over the field of athletic activity.

Then my proofreader, Norbert spoke up with the headline:

"The Shadow Over the Symbol of Joy in Sport"

"Once it shone as a symbol of joy and fair competition, but today the innocence of that symbol has been clouded. Increasing political influence has cast a dark shadow over what was once a pure ideal. What once captivated athletes and fans worldwide is now increasingly co-opted by ideological agents.

This development strips sport of its original meaning as a unifying force among peoples.

Where once talent and performance took center stage, unwanted political messages and dogmas now intrude.

The symbol of joy, once representing carefree moments and the pure spirit of sport, has become a plaything of foreign interests.

The bitter reality is that this takeover is robbing sport of its soul and permanently diminishing the joy many once found in it."

Before Willi faced the Olympic fight in Sydney, a
photographer for Stern magazinen¹¹⁾ captured him
just as athletes of ancient times once appeared —
naked,
without advertisements,
without ideology.

The Dragon Family

Anyone who thinks that was the end of the disturbances is mistaken.

More dragon offspring are pushing forward, some even breathing fire.

After the 2004 tsunami, Willi Kothny immediately went to the disaster area. First, to help the German Embassy identify bodies. Then, to assist German tourists in hospitals or help organize their return

flights. Later, he built a fishing village of 100 houses for sea nomads on the Andaman Sea, financed by German donations.

But to do so, he had to hang up his fencing career. Thai sports journalists later named him "Athlete of the Year."

A very different reaction came from F.C., a local party and union official and chairman of a writers' association from Bendorf, near Koblenz.

On Facebook, he had sung a hymn of praise to footballer Diego Maradona and his political engagement (see Appendix 4 for wording):

"Diego Armando Maradona carried a tattoo of Che Guevara on his upper arm and one of Fidel Castro on his calf.

Of course, he wasn't an angel. The fact that he also used drugs was exploited by the right-wing media to stir resentment against him."

Naturally, I had to respond because my sons are also athletes, but they don't lean politically to either the right or the left.

F.C.'s reply:

"Athletes who close their eyes to social realities are opportunistic crawlers..."

So, athletes who help selflessly and on their own initiative are "opportunistic crawlers"?

Did my sons "close their eyes to social realities" by building 100 houses and 20 fishing boats for the victims of the tsunami?

Or is that just political polemic?

"These defamations aren't just directed personally at athletes," Norbert added, "there are also the invisible dragons of the system."

He explained further:

"These invisible tauri can take the form of political decisions, restricting access to sports facilities, cutting funding, or canceling events.

Suddenly, regulations and directives determine how and where sport may take place, pushing personal freedom of movement into the background.

What was once a private passion becomes a pawn in political games, and even 'the most beautiful side thing in the world' is no longer safe from political influence."

For now, these dragons and tauri have not yet completely taken over fencing.

But examples from football show where things are headed.

It's not the purpose of this book to examine the COVID issue as a disruptive factor in sport, but a brief personal note:

I'm unvaccinated, and I caught the virus on a flight to Málaga.

Fine.

But: two close relatives, both vaccinated and boosted, also caught COVID. Twice.

It was our personal decision to act that way.

But athletes, as the Kimmich case shows, are put under massive pressure.

If you look closely at the picture on the left, you'll notice that the "little man" in the background is also a fencer. He's threatened by the dragon just like the fighter in the foreground.

But he receives unexpected help from above, for he bears, instead of tattoos of Che Guevara and Fidel Castro, an angel tattoo on his left upper arm.

Olga Kharlan

Olga who?
Olga Kharlan.

She is a Ukrainian fencer who, at the 2023 World Championships in Milan, refused to shake hands with the Russian fencer Anna Smirnova.

On her website, the sabre fencer lists her achievements.

Impressive:

2008 Olympic Games – Gold Medal
2012 Olympic Games – Bronze
2016 Olympic Games – Silver + Bronze
5x World Champion
7x European Champion

Without taking sides for or against this exceptional athlete: an open post of hers on the internet makes the political influence of powerful figures on sports strikingly clear.

Olga criticizes (see Appendix 7) that when Russia violates rules, nobody is surprised, but when the International Fencing Federation (FIE) covers up these violations, it is a slap in the face.

Russia, she says, now wields such power over the FIE that the federation has openly violated the IOC's recommendations by allowing blatant war propagandists and military personnel to compete, even including them in team rankings.

This criticism is harsh, but an athlete is allowed to express it.

Back to the 2023 World Championships in Milan: At the end of the bout, Olga Kharlan refused the customary fencer's handshake.

According to regulation t.122 (17):

"When the last hit has been scored, the bout is not over until both fencers have saluted their opponent, the referee, and the audience. They must therefore remain still on the strip during the referee's decision and, after it is given, perform the fencing salute and shake hands with their opponent. If either fencer fails to comply, he/she shall receive a penalty."

Olga, after the match, refused to shake hands with her opponent a Russian, "as a protest against Russia's invasion of Ukraine," as Google's AI notes (20).

A clear violation of the rules. The International Fencing Federation then tried to downplay this breach by reinterpreting the rule, claiming that Olga's tap of her blade against Smirnova's was a "fencer's salute."

Yet the rules clearly state "shake hands."

The FIE, for political reasons, avoided enforcing a sporting rule consistently.

On the contrary, the FIE lifted Olga Kharlan's suspension at the Milan World Championships and declared that the handshake after a bout was no longer mandatory. Offering a blade tap would suffice (19).

Three corresponding inquiries (two emails and one registered letter) to the FIE went unanswered.

Shortly afterward, Olga Kharlan went further (Appendix 8):

The fencer lamented that more than 650 Ukrainian athletes had been killed by Russia in this war, and

yet, their killers, wearing sports uniforms, now stood beside them at the same starting line.

Olga reminded that systematic violations of IOC recommendations could cause a federation to lose its Olympic status.

If the FIE does not comply with IOC guidelines, fencing could be removed from the Olympic program.

The FIE, she argued, is on the verge of misusing sport as a weapon of war, explaining:

Russian officer Sofya Velikaya, a Major in the Russian Army, is not just a fencer, but a "tool of state propaganda," part of a vast machinery that has justified war and violence for years.

Of course, this is Olga Kharlan's perspective, one-sidedly Ukrainian, clearly so, as shown by her labeling Russian soldiers collectively as "murderers."

As understandable as it is that people in war take sides, it is counterproductive to carry that war into sporting arenas.

Perhaps the two fencers, despite their opposing views, should have embraced, as a sign of peace and reconciliation on a personal level.

It would not have been against the rules, after all.

When searching for similar cases, AI found only one:

"An example of a friendly gesture between players of two hostile nations is the story between Iranian footballer Ali Karimi and Israeli footballer Tal Banin. During a match between Iran and Israel in the 1990s, the two players exchanged jerseys and showed a gesture of friendship and respect. The act was seen as a sign of peace between their peoples."

I also cannot say what influence Ukrainian Sports Minister Vadym Gutzeit may have had on the sabre fencer.

I know him personally. Gutzeit was himself a sabre fencer and crossed blades with the rising Willi Kothny in the late 1990s.

An irreproachable athlete, but as a minister of a warring nation, he likely holds different views now than he did as a sportsman.

That Vladimir Putin uses his fencers as psychological weapons is well known. In a fencing channel, the Ukrainian Vasili Golod laments: "Russian military athletes are allowed to fence at a world championship while their army comrades are simultaneously killing Ukrainians."

It reminds me of February 18, 1943, when Joseph Goebbels urged the crowd in the Berlin Sportpalast:

"Do you want total war?"

**Those who want total war
turn sports venues into battlefields.**

If we follow that logic through, American athletes could never again compete anywhere since the U.S. repeatedly finds itself at war with parts of the world. The same applies, in milder form, to Russia, Israel, India, Pakistan, Laos, Thailand, Cambodia, North Korea, Syria, Iraq, Iran, and others.

Whichever position a reader takes, they find themselves in the midst of a psychological war between relentless enemies, a war also fought on fencing pistes around the world.

It has always been the athletes who suffer most when officials or politicians decide to exclude them from competition.

My personal plea to Olga Kharlan:

“Dear Olga Kharlan, please turn 12 pages ahead to the chapter ‘Integration Factor Sport.’

There I describe how shared interests can unite people.

Is fencing not a shared interest, even with Russians?”

Google translation:

«Шановна Ольго Харлан, будь ласка, перегорніть сторінку 12 до розділу «Спорт як фактор інтеграції».

Там я описую, як спільні інтереси об'єднують людей. Хіба фехтування не є спільним інтересом? Навіть для росіян?»

Halt

"Halt!" this is what a historian would now cry out, stopping the duel on the piste before it escalates into World War III.

And indeed, László Marácz once gave this very command, standing at the crossroads between fencing as a military necessity, a defense of honor, and as a sport.

A Hungarian, he made clear how, in his country, fencing after World War I played a vital role in rebuilding the nation.

A delegation of Dutch military fencers, led by "Arie" de Jong (1882–1966), forged close ties with Hungary's fencing elite. These fencing exchanges were part of a broader Dutch diplomatic cooperation and proved crucial in restoring Hungary's membership in international sports organizations in postwar Europe.

Fencing rose to the status of a national sport in Hungary, with influence lasting well into the late 20th century.

The flagship figure of the Hungarian fencing school was sabre fencer Tibor Berczelly.

He competed with Hungary's sabre team at the 1936 Olympic Games in Berlin, winning gold. The success

would be repeated twice, in London in 1948 and in Helsinki in 1952.

At the first Fencing World Championships in 1937 in Paris, he also became world champion with the Hungarian sabre team.

The Hungarian school, based on military fencing, was characterized by refined technique, a style that kept the fencing world in check for decades.

Yet success often tempts one to remain on the same step where that success was achieved.

It was, not least, Eberhard Mehl who, together with Willi Kothny and Dennis Bauer in the late 1990s, heralded the decline of Hungary's dominance.

Foil fencer Mehl, after earning his own successes (bronze at the Rome Olympics), sought a new challenge. He switched weapons and trained in Budapest to become a sabre coach.

The analytical Mehl then searched for ways to break through Hungary's near-perfect technique, and he did so, ironically, against Hungarian fencers themselves.

Mehl combined technique with athleticism.

Hungarians in the 1990s almost scoffed at athletic training.

Once, Mehl asked a new Hungarian coach, who was assigned to assist him as a co-trainer by the national sports federation, how he trained for speed.

The Hungarian's answer:

"You can't train speed. Speed comes naturally."

Another top fencer from Bonn complained that his Hungarian coach had forbidden him from entering the weight room.

We gave him asylum in Koblenz, and Mehl personally developed a training plan for him.

That fencer later went on to the Olympic Games in Sydney with the German sabre team, and won bronze.

In Koblenz, there were two fencing clubs, KSC and CTG.

KSC was coached by a Hungarian Olympic champion. CTG, by Mehl.

The plan was to merge the two into a single fencing community that would revolutionize the sport: Hungarian technique and German athleticism, an unbeatable alliance.

But things turned out differently.

The merger took place, yes, but the project failed because the Hungarian refused to accept athletic training.

Yet Mehl's method could be clearly measured by his students' success, notably, in decisive victories against Hungarian fencers.

The standout bouts have already been described under "Strategy and Tactics." The final highlight came in the bronze medal match in Sydney.

There, Domonkos Ferjancsik, a Hungarian heavyweight, awaited.

Willi managed to counter the Magyar's refined technique with pure athleticism, landing the winning hit at 15:11, symbolically with a "mongoose leap," flying horizontally through the air.

Hungary has since recovered and regained its place among the world's elite.

Experts say their fencing style has become more athletic, confirming the thesis that a once-successful model often lingers too long on its step of triumph, failing to climb to the next, out of fear of new challenges.

Sochi

Flight TG925

Black Sea

August 10, 2025, 5:54 p.m.

The Thai Airways flight attendants are clearing away the last of the plastic dinner trays. The options had been beef or chicken, both with noodles and peas.

I'm on my return flight from Munich to Bangkok. In Germany, I had undergone surgery, the result of a motorcycle accident in Pattaya, when a car slammed into me from behind. Time was critical. A spinal injury threatened paralysis. In Munich, they could act quickly. Now, I can walk again, slowly, on crutches, but still.

Flight TG925 passes along the Crimean coast. Somewhere below, a shot is fired. Up here, at 11,000 meters, you can't hear it. A soldier falls. You can't see him from this height.

But I think, Soldiers don't die, they fall. It sounds more humane. And yet, somewhere in Russia or Ukraine, a mother waits for her son, the one who will never rise, never return home.

I sip the last puddle of red wine in my cup. Others recline their seats, drifting toward sleep.

Below us, people are dying.

Some for a despot who craves more land, others for a man whose pockets aren't yet full enough.

Strangers, pitted against each other, ready to kill, stirred up by their rulers. Only the mothers of the dead are united, in the grief for their fallen sons.

I'm tired too, but I don't sleep yet.

Because soon we'll pass over the place where this war becomes personal, where the dead aren't numbers in a soulless statistic.

A few minutes later, Sochi glides by beneath the clouds. Somewhere down there lives Mark.

Mark is my grandson Morgan's best friend. The two went to school together in Pattaya. Mark is the son of a Russian man who worked in Thailand. Morgan is Willi's son.

About a year ago, they said goodbye at Suvarnabhumi Airport.

Mark had to return to Russia with his father.

There were tears.

Both were supposed to begin university, one in Thailand, the other in Russia.

But while my grandson now studies for his exams, his friend stares at a draft notice from Putin's administration.

Mark is to be sent to the military, to be used as cannon fodder somewhere down there, at the front.

I wipe a tear from the corner of my eye.

What will I tell my grandson when I land in Bangkok?

That I just passed over his friend?

That I could feel his nearness, but couldn't help him?

I crush the empty wine cup in my hand.

I crush it out of rage, that one single person has no power to stop this madness.

And what does any of this have to do with sport or fencing?

Because fencers, at least, are not quite as powerless as I am.

Fencers from opposing sides could still meet, and make a gesture of friendship: to face each other, not to kill, but to fence.

Peacefully.

With a handshake at the end of the bout.

To put what unites us above what divides us.

The Fencing Family

When the German Fencing Federation presented the national sabre team for the 2000 Olympic Games in Sydney, they introduced four fencers whose roots spanned four continents. From left to right:

- Alexander Weber, son of an Argentinian mother
- Dennis Bauer, German
- Willi Kothny, Thai
- Eero Lehmann, with Moroccan heritage

And if the Eislingen athlete Joe Rieg (second from the left) had not replaced the former national coach Boris Stavrev, there would have been a Bulgarian on the team as well.

All of them were united by their determination to excel and ultimately rewarded with an Olympic medal.

All of this happened without LGBTQ labels, without “queer,” without “transgender.” And even if a gay athlete had been there, it wouldn’t have bothered anyone.

It was sport alone that achieved this remarkable integration,
without political influence, without ideology, without religion.

There are countless examples of how sports bring people together:

Keeth Smart is an American fencer, a few shades darker than my sons.
One day, he emailed me, asking if I could send his daughter the videos of Willi’s matches.¹²⁾
She admired his fencing style and wanted to model herself after him.

Another example of sport connecting two strangers across two continents.

In fencing especially, this sense of belonging is deeply rooted. People seek connection, they trust one another.

I experienced this strongly in Tehran.

Between bouts, I spoke with Iranian female fencers. They were hungry for news from outside their country, and I wanted to understand how they managed life under the mullah regime. We talked openly. The women had no hesitation in sharing their thoughts, no fear that I might betray them.

I learned that many young people embrace a Western lifestyle. Private homes host parties, much like the nightclubs we have here.

Social and political conversations, right next to the fencing pistes.

But our conversations caught the attention of the moral guards.

They intervened, cutting off the exchange of information.

Still, even if briefly. Sport had built a bridge between us.

Another example:

When Willi was marginalized by the German Fencing Federation after his switch of nationality, it was fencers from around the world who came to his aid.

The U.S. national team invited him to train with them. The Chinese national team included him in their Olympic preparation.

If you visit my son's Facebook page, you'll find hundreds of contacts across the globe.

A potential counterweight to the dragons.

Connected by Fate

In 2025, Willi served as a referee at the Para Fencing World Championships in Korea. On Facebook, he reflected:

"Working as an international referee at the Para Fencing World Championships in Iksan, Korea, has been an unforgettable experience.

The atmosphere was electrifying, charged with the passion and determination of the world's best para fencers.

I was honored to be selected as the video referee for the men's epee team final between Ukraine and Iraq. The match was an intense showcase of skill, strategy, and true sportsmanship. Every decision mattered, and I was proud to contribute, even in a small way, to a fair and thrilling finale.

It was a privilege to witness Ukraine claim gold and Iraq secure silver. Their extraordinary performances were a testament to the spirit of para fencing.

I am deeply grateful to have been part of such a remarkable event.

Thank you, World Para Fencing, and congratulations to all winners and participants. You are all incredible human beings."

Sport as a Force of Integration

Note: Readers already familiar with my book "Migration Remigration" may skip this chapter.

*

I first learned how sport can become a powerful engine of integration outside the world of sport, in Hamburg, at the Academy for Journalism.

One morning, our instructors sent us out into the city center with a bold assignment:
approach as many strangers as possible and start a conversation.

(Try it yourself if you're brave enough.)

That afternoon, we presented our findings:

Walking up to strangers with no context: rarely successful.

But whenever there was a shared topic, conversation flowed immediately.

Example:

"Oh, your dog is adorable! I have one just like that."
And suddenly you're deep into a discussion.

Or:

"You're reading the Hamburger Morgenpost, do you think Cruyff to HSV could actually happen?"

And there you go: instant connection.

The secret is simple:

Shared interests dissolve barriers.

My two sons had integrated so well in Germany that they lost their connection to their birth country. They even refused to speak with other Thais. So I used what I learned in Hamburg, and now we arrive at sport:

I wanted both to remain rooted in their own culture.

So while on holiday in Bangkok, I went looking for a fencing club. By chance, thanks to the newspaper The Nation. We ended up at the training session of Thailand's national team.

In the National Stadium, the ringing clash of sabres greeted us like music. We followed the sound, a dozen athletes on strip, blades flashing.

An older fencer approached us:

Could he help?

We explained in English that we were seeking contact with Thai fencers.

His name was Jomyut.

And he wanted to see what Willi and Somkhit could do.

He handed them gear, and one by one, they fenced every member of the national squad.

To Jomyut's astonishment, 13-year-old Willi. A German youth fencer, defeated the entire Thai national team.

Days later, both boys were welcomed into the Bangkok Star Fencing Club and allowed to compete in the Thai Championships. For Willi, who was on the German rankings and technically forbidden from competing abroad, we used a trick: he entered under his Thai birth name.

Nobody in Germany would notice.

Then came the sensation:

Willi reached the medal podium at the Thai National Championships.

The ice was broken, thanks to what I learned at journalism school.

Somkhit, Thai by citizenship, fought bravely and would later join the Thai national team permanently.

A highlight of this new chapter came months later at the 14th Thai Open. Thailand vs. Germany in the team final.

Before the final bout: 40–32 for Thailand.
Not surprising, I was the third fencer on the German team, and every Thai had beaten the living daylights out of me.

Both teams sent out their best for the final match:
Willi for Germany.
Somkhit for Thailand.

A duel between brothers.

Willi turned to me:

"Papa, am I allowed to win?"

I told him:

"You must.
This is sport, and in sport, everyone must give their best. No matter who stands across from them."

Willi began his comeback.

44–44.

Then the final light:
45–44 — Germany.

Gold. Won against his own brother.

With tragic consequences:
Thai national coach Gábor Fekete expelled Somkhit from the team.

A painful setback, rooted in personality difference.
Technically, Somkhit was superior, but Willi had the killer instinct.

So Somkhit focused on coaching, with great success.
He would one day become the Thai national coach, leading his brother to the Asian Championship title and supporting him at the Beijing Olympics.

Both boys had fully re-anchored in the country of their birth.

Yet for both, something was more important than medals:

Fairness and helping others.

Willi received the German ARD Fair Play Award for giving his Olympic team medal, which he wasn't awarded under the rules, to his friend Eero Lehmann, whom he had knocked out in the individual event.

In Thailand, journalists voted him Sportsman of the Year for pausing his career to support tsunami relief. He also received the Good Samaritan Award.

Despite all of my criticism of sport's darker sides, these positive aspects matter more:

Communities do remember their own.

The city of Koblenz sent Willi financial support to Beijing, the same as for their star flèche fencer Peter Joppich, even after he switched federations.

Individuals within the system stood tall: Dennis Bauer's father stepped in to train Willi when officials blocked access to his former teammates.

Dormagen's role, as earlier described, speaks for itself.

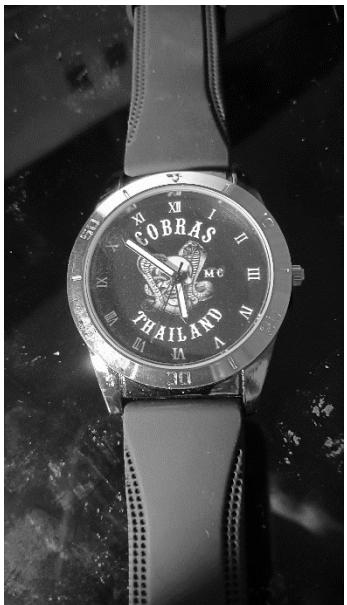

And in return, our home welcomed the Thai national team into our house, épée fencer Lek, foilist Nonthapat, and others.

These stories outweigh everything negative.
Because at its heart, sport brings people together.

6th Section

In the Binoculars

The Turning Point

Banglamung
June 17, 2025
5:51 p.m. and 34 seconds.

Dam Dam, my black temple dog, starts barking, tail wagging like crazy. He only does that for family... or when Stone arrives, the president of Cobras MC.

Dam Dam knows Stone always brings him a treat. And today is no different.

But this time, Stone has brought a treat for me as well: the brand-new club watch of the Cobras.

With these bikers, I feel a real bond, because we live by the same rule:

“Give respect. Get respect.”

It doesn't matter what a person is, only that you respect them as they are.

For me, that watch is the starter pistol of a new life. I'm stepping into the fight.

Clinic Dr. Decker

"Hello, I'm Hannes, your night nurse today. Good evening," a tall, well-built man says as he steps into my hospital room at the Clinic Dr. Decker.

I return the greeting.

"How are you feeling?" Hannes asks.

"Good," I reply. "I just can't walk."

Hannes laughs. He's one of the many staff members here I've grown fond of, and one of the few who clearly come from Germany.

In this private Munich clinic, it looks as if Dr. Decker went on a recruitment tour through the Balkans after the collapse of Yugoslavia, hiring the best nurses he could find.

I even called my friend Nina Wagner in Croatia to ask how to say "good day" in Croatian, just so I could greet Nurse Lena in her native language. She is especially dear to me because my cat, rescued from starvation, is also named Lena.

"Dobar dan," I say to Nurse Lena the next day as she smooths out my tangled bedding.

Unfortunately, I don't have enough friends around the world to also greet the rest of the staff in Bulgarian, Romanian, Serbian, Russian or Greek. It isn't necessary anyway, they all speak perfect German, just like the first generations of immigrants who came to Germany to work and send money home.

I already knew Dr. Decker from earlier: he once performed a colonoscopy on me, and he operated on Willi.

My son had needed surgery on his calf because Coach Mehl, in his eagerness, had neglected recovery, leading to poor blood circulation in the muscles until they "shut down." As we know, muscles have a tendency toward laziness.

My own operation became necessary because, likely due to the motorcycle accident, a bony growth on my spine was pressing on the surrounding nerves and threatening to pinch them off entirely.

Without the surgery, it would have eventually led to paraplegia. Time was critical, but speed was impossible, because the insurance companies blocked a quick procedure in Thailand.

This predicament had revealed itself years earlier in Germany when I asked my insurer, Continentale,

whether they would continue coverage if I moved to Thailand.

My agent, Lutz Hufschmidt, a respectable gentleman, reassured me:

"We can continue the insurance, though your premiums will increase by 50 percent."

A bitter pill, but one I was willing to swallow. After moving, I reported my new address to headquarters... and instead of the updated policy, I received a cancellation notice.

I called them immediately and referenced my agreement with the agent.

Their response made me doubt everything:

"Yes, the agent was correct, we could continue your policy. But in your case, we won't." Followed by a long stream of legal justification.

From one day to the next, I was uninsured.

The Thai insurer I had since taken out, WRLife. Also refused to pay, claiming from their "desk diagnosis" that the condition was degenerative.

Yet again the agent, Mark Levitan, expressed sympathy, yet the bureaucrats at the claims department remained unmoved.

Thailand was no longer an option, since payment is required before surgery.

So: back to Germany.

In Munich, the operation on my spine was a success. Professor Dr. Stefan Zausinger removed parts of the growth, relieving the nerves.

When I'm able to walk with a walker the next day, tears fill my eyes. Suddenly I can truly understand the performance wheelchair fencers deliver when they step into competition.

Every bout begins as a victory over themselves, accepting fate and fighting against the adversity of disability.

After his competitive career, Willi dedicated himself to these athletes and has refereed wheelchair fencing ever since. With such passion that he was nominated as referee for the 2024 Paralympics in Paris.

And he went even further:

When a fencer at the NIST school asked if he could coach her brother, Willi agreed, only to be stunned

when she returned with her brother in a wheelchair, paralyzed from the waist down.

I had always respected wheelchair fencers. But the full weight of what such a disability means only hit me when I myself was one step away, from cane to walker to wheelchair.

Only here, where life is reduced to the basics, do you realize the strength that disability can awaken within a person.

A disability forces you to reflect on life, accept your situation, rethink your future, and fight the battle against your handicap. A battle you fight alone.

That deserves respect.

Sun Fitness

82.2 kilos. Wow.

One look at the scale and I'm celebrating. Perfect weight for someone 182 centimeters tall.

Then I glance in the mirror, and freeze. A massive belly perched on two matchstick legs. Two months of barely moving have left their mark. The muscles in my legs have vanished, and the belly fat has taken over. There was no avoiding it, I had to get myself into a gym.

The moment I step into Sun Fitness on Naklua Road, the atmosphere hits me, the same vibe as the old weight room in the basement of the Max-von-Laue Gymnasium in Koblenz: Stationary bikes, weight benches, dumbbells, power racks, and the smell of sweat.

And as I start warming up on the bike, my mind flashes back to Eberhard Mehl's training program, the one he used to torment his athletes into becoming model physiques.

Periodization. That was the magic formula. The edge Mehl had over every other fencing coach in Germany. Now, I was going to use that formula on myself, a light version, of course. My goal wasn't Olympic glory. My goal was simply... to walk normally again.

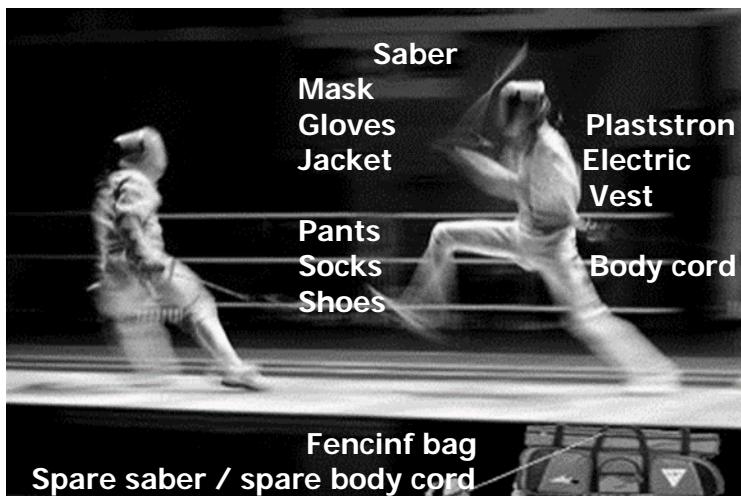

Bimbes

Bimbes is Palatinate dialect and became part of common German thanks to former chancellor Helmut Kohl and his donation scandal. In short, Bimbes means money.

And money is the biggest factor of influence in sports.

Without money, nothing works in sports, and in fencing, even less so.

While street kids often make do with a tin can they kick around on the asphalt, fencing gets serious from the very first moment:

Before a child can even make their first attack, Dad already has to put down a thousand euros.

No wonder fencing is considered an elite sport. In many countries, people only start fencing if they're officers, policemen, or university students.

When Somkhit and Willi entered secondary school, their PE teacher Eberhard Mehl recognized their talent for fencing. Willi clearly had the potential.

But did he also have the will to excel?

Wiradech, his Thai name, literally means "the strong-willed."

Would he live up to it?

Willi was immediately hooked. Somkhit was more reserved. Since fencing is an expensive hobby, I made a deal with the boys:

I would pay for the expensive equipment and the travel to every tournament. In return, they had to commit to attending all training sessions and all competitions. The contract was valid for one year.

We all signed it, officially, just like in real life.

And that contract was renewed year after year, right up to the Olympic Games in 2000 (lol).

Anyone who thinks that's where the expenses stop... will quickly learn otherwise. Once the kids enter the competitive level, money becomes

influence factor number one, with all the negative consequences that come with it.

Two examples:

1. Dennis Bauer

Willi's fiercest rival, Dennis Bauer, was on the brink of winning the Junior World Cup in 1998. He needed one more World Cup in Palermo to secure the points. But neither the German Fencing Federation nor his club CTG had money, or interest, in his title.

So as the head of the fencing department, I reached into my own pocket and paid for his flight myself.

He took that chance, and turned it into success.

2. Willi Kothny

When Willi switched to the Amateur Fencing Association of Thailand (AFAT), we wrote a contract:

AFAT would pay for all World Cup events as long as Willi stayed within the Top 32 of the rolling world rankings.

They rarely stuck to the deal, but I always found enough Bimbos to finance the flights anyway. Except once. The Boston World Cup was crucial, Willi needed to defend a 5th place from the previous year. I begged AFAT to cover just this trip.

They refused. In fact, my empty wallet played right into their hands:

Because Willi did not participate, he slipped from 32nd to 33rd in the world rankings. The ink wasn't even dry before AFAT held a press conference to proudly announce:

"Willi has dropped out of the Top 32 and will no longer receive financial support."

Applause from the épée and foil camps, they hoped more money would now flow their way. A mistake. The money simply found a different path.

But the message was clear:

At a certain performance level, nothing in sport works without money, unless you're in a discipline funded by spectators and TV rights.

So the goal must be to reduce dependency on federations and instead find funding sources that are reliable and sustainable.

Where does one find such sources?

In Koblenz, I had a kind of money divining rod: two well-paid jobs. Enough to buy a team bus for the club and airline tickets for my sons.

But then one of those money streams dried up, and with it, my self-employment vanished.

Dramatic Arc

Every story, every play, is built upon a dramatic arc. I learned that at the Academy of Journalism.

The arc begins with a short introduction.

Then comes the situation: the audience gets to know the main characters and their environment. First hints of conflict appear.

In the main section, the conflicts deepen, tension rises, and new problems drive the narrative forward.

The tension reaches its dramatic peak, the situation appears hopeless.

Then comes reflection, the search for a solution.

Once the turning point is reached, the conflict resolves and the story concludes.

But what if we are still in the middle of the story and the ending is nowhere in sight? As in this book.

Pause.

Take a breath, gather strength, rethink the tactics, regain courage, assess the situation.

Wait for the next command: "En garde."

The Unknown

Mathematics was always about dealing with multiple unknowns.

And yet, math has been my constant companion.

I find it easier to chat with dragonflies by the pool in the morning than to solve a simple rule of three.

But real life forces mathematics upon you. It all has to be financed, whether you like it or not: food, clothes, wife, children, sports ...

Mathematics even takes center stage when you want to become independent.

Like around the turn of the millennium, when we planned to open our own fencing center in Thailand.

First, a piece of land had to be acquired.

My thought: buying land can never be wrong.

Land keeps its value even in hard times.

I had saved a few thousand. Willi found a parcel in the greater Pattaya area.

Later, a fencing center was to be built on it.

And soon the plan became concrete:

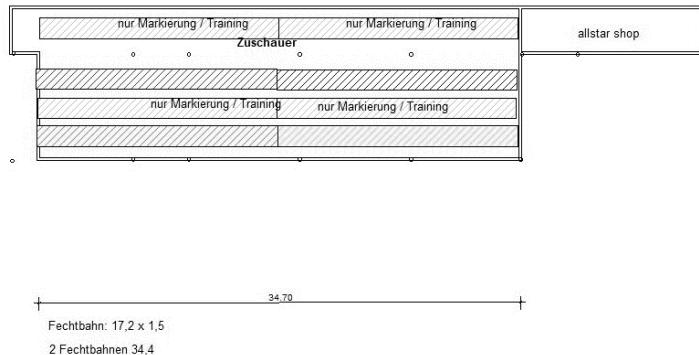

But the fencing environment needed to move from Bangkok to Pattaya.

The Rugby School Pattaya offered a solution. They wanted to make fencing, like at NIST, an elective subject, and hire my sons as coaches.

With that secure income in the background, it would become possible to build a fencing center in several expansion stages.

Then came the Corona dragon.
The plans turned into scrap paper.
But the idea lives on.

Suddenly and unexpectedly, the Ambassador Hotel in Bangkok offered a solution.
The hotel manager offered a floor suitable for setting up a fencing hall:
Four aluminum competition pistes and four training lanes in between would be enough to run independent training and competitions.

And now mathematics enters the scene:
Kung Wijitta, Willi's wife, calculated the costs for
the hall's construction, rent, and operations, a six-
figure sum in euros.

Willi had to take the risk, just like in sport.

He took out a mortgage on the house I live in (and
that I built).

Construction could begin.

There was no turning back.

Outcome uncertain.

What remains are the dependencies.
They simply shift from NIST to the Ambassador.
Smaller, yes, but still there.

The dramatic arc reaches its peak when I pull the
old Pattaya fencing center project out of the drawer
again.

But how to finance it?

With zero euros in the account, unpaid hospital
bills, and surgeries ahead?

A new assessment of the situation is required.

Or, wait for a fairy tale to become reality.

I experience such a fairy tale every morning in the
swimming pool of my Belgian neighbor, Lou Lou.

The Fairy Tale of the Dragonfly

My time in the swimming pool isn't just for exercise,
it's also for conversation.

Every morning, I'm greeted there by a dragonfly,
with whom I exchange my thoughts.

A beautiful emerald-green creature with transparent
wings.

Dragonflies have something we humans lack:
They can move in any direction from a standstill,
forward, backward, up, down, left, right, even
diagonally if needed.

They act according to the situation, not ideology,
unlike birds of prey.

When I hold a finger out to my conversation partner
(I hope I got the gender right) at the pool's edge,
she lands on it and listens.

I don't need to speak, she reads my thoughts, and I
read hers.

Once, I told my wife about these conversations. She
said I was crazy.

(You, dear reader, may think so too.)

She never wanted to tell me her name, so I simply
called her "N.N." no name.

And N.N. told me:

She specialized in optimizing her hunting methods.

The Dragonfly News, she said, once compared her to a "renowned crisis economist."

Since then, she's been a regular guest on almost every major pool talk show.

She confided that she learned this from a human on the other side of the pond, one she admired, because life around the pool wasn't so different from human society.

There were successful hunters and envious failures here too, which led to insults and territorial disputes.

Once, at the height of an argument, N.N. decided to raise her voice against intolerable conditions at the pool, and was promptly ostracized by the established water residents.

What impressed me was how much she resembled her human counterpart across the pond: She refused to be co-opted by any one pool faction. She even accepted a nomination from the shadow side group to run for a high office within the sunny side community.

She was promptly expelled from her own group.

One day, this fairy-tale creature offered to advise me on hunting techniques.

She said she knew a thing or two about that. I declined, I know next to nothing about that field.

Still, I often listen to her in secret.
Maybe her hunting system could be adapted to my
own needs perhaps even help me find a quick way
to finance the fencing center.
But I was disappointed. N.N. set the bar too high.

To make her point clearer, she quoted from a
human financial exposé, perhaps, she said, it might
help me in acquiring bimbes (cash):

"Investment gains must be sustainable.
When evaluating time and capital investment,
another key factor is sustainability.

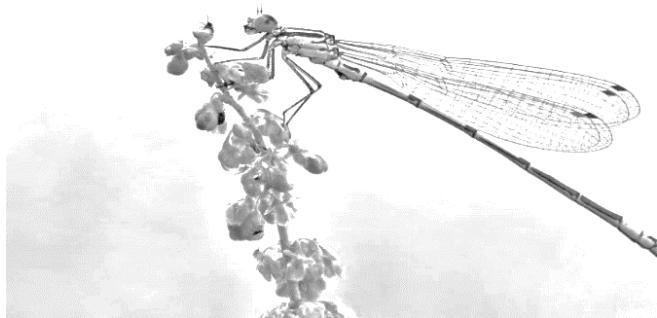

The most important thing in investing is to secure
your capital while minimizing risk.
Only after that should you focus on maximizing
returns.

In the long run, it's worthwhile to invest time early
on to achieve consistent gains."

"Nonsense," I thought.
"With that kind of financial gobbledegook, there's
no way to fund a fencing center."

N.N. read my thoughts and compared human
behavior to her own world.
"It's really quite simple," she said.

"The most important thing is to secure your basic nourishment while minimizing hunting risk.
Only after that do you worry about increasing your stockpile.
Translated to your finances, that means: take time, save up, reduce risk, and maximize gain."

At 85 years old and with an empty wallet, this method of financing my project was no longer an option.

Since then, my conversations with N.N. have focused on things that touch the heart and soul.

And my wife still thinks I'm crazy.

AI

While researching this book, I repeatedly used AI programs to gather information about athletes. What interested me most was the interaction between sport, ideology, and politics.

The results were surprising.

Question 1:

Which female athlete refused to wear a headscarf at an international tournament?

AI's answer:

The chess player who made headlines for refusing to wear a headscarf is Dronavalli Harika, an Indian chess grandmaster.

Question 2:

Are there athletes who were punished because they refused to wear political symbols?

AI's answer:

Serbian football star Nemanja Matić was suspended for four matches in the top French football league, "Ligue 1."

The midfielder, who played for Olympique Lyon last season, was banned by the league on Thursday because he refused to wear a rainbow-colored LGBTIQ symbol during a league match, part of a

league-wide campaign promoting diversity and inclusion.

Question 3:

Are there cases where athletes refused to shake hands with an opponent for political reasons?

AI's answer:

We already know this one:

The fencer I found was Olga Kharlan from Ukraine. At the 2023 World Championships in Milan, she refused to shake hands with Russian fencer Anna Smirnova because of Russia's invasion of Ukraine. Instead, she chose to tap blades, a gesture that honored the rules and the opponent while at the same time signaling protest against Russian aggression.

No matter what I asked, the AI had an answer. So why not use AI to collect money as well?

But caution: r i s k.

Even in sports, AI didn't always get it right.

Junk-Star-Coin 1)

Warning:

This chapter recounts an episode from my struggles in life and is not applicable to others. It is a desperate attempt to become independent of external influences through money.

And everyone must be aware that nature shows no mercy. It's a fight in a snake pit. And when it comes to finances, it's even worse.

Please do not try this at home.

"When Willi is airborne, he's at his most dangerous," the Koblenzer Rhein-Zeitung once wrote about my son's risky fencing style.

I had to take risks too.

The question for me was: Could AI be used to raise money for the project?

And the internet is a risk.

It's crawling with scammers. I myself have dealt with around 40 of them. The pattern is always the

same, huge sums are promised, but first you have to pay a small amount upfront.

Example:

A supposedly terminally ill widow offered money for my project. Her bank manager created an online account for me and gave me the login details.

Wow. USD 1.7 million were sitting there.

Using the PIN they provided, I logged in.

As a test, I wanted to transfer €100 to my German account. But before the transfer could be executed, I was instructed to pay a €700 “activation fee.”

Ha ha ha ha. Easy to see through.

As were four more grotesque offers:

Relatives with the name Kothny had apparently died in various accidents and left me millions.

A Kothny in Togo in a car crash, another in Benin in a terror attack, one during the tsunami in Phuket, and even one in the World Trade Center attack on 9/11.

Because of our humanitarian project “Willi hilft,” through which we helped the sea gypsies of the Andaman Sea recover from tsunami damage, I had become a magnet for scammers.

I defeated all of them, until I finally met my match.

4%

Math was always a horror to me. The whole school year I swung back and forth between “sufficient” and “insufficient.” I comforted myself with a joke about my number-crunching weakness.

A young man was driving his Rolls-Royce through the city when a pedestrian crossed the street on a red light. Full stop: the pedestrian fell. The driver jumped out of the car, helped the man back to his feet, and paused: “Oh, Professor, that could’ve gone really wrong.”

“Max,” the professor marveled, “Sorry, my eyes. But I see you’re driving a Rolls-Royce and wearing a Rolex. You must be doing well. In math you were absolutely terrible. How did you come to such wealth?”

“Oh, Professor Ebretzberger,” the former student explained, “Very simple. I buy crates for 1 euro and sell them for 5 euros. And I live off that little 4 percent.”

Something like that was how I wanted to build a fortune now: with crypto. Buy cheap, sell high.

Ramsch-Star-Koin¹⁾ is an AI-driven crypto platform that promises high profits from small investments.

Albo Pexal¹⁾ from Scandinavia introduced me to the system. It was tempting: 1.2% per day on an investment should rapidly build a fortune. Pretty much the same way Max made his 4% profit. No math skills required.

I told Libelle about it. She advised against it. I ignored the warning. I invested.

A small investment multiplied rapidly. But: it was only a virtual increase on the desktop, because soon came the hammer blow: the site needed to be reverified with a deposit of 100 USD.

And it had to be exactly 100.00 dollars. I don't know how, but when I made the deposit, 3 dollars extra landed in my account. This overpayment was not accepted for verification. I was supposed to deposit again, exactly 100.00 USD. Both deposits would then be refunded.

Yeah right. My risk-jump ended in a belly flop.

But it got even better: my account swelled and swelled within just a few months to a gigantic 1,024,445.00 USD. Then came the message from the crypto platform that my account needed maintenance.

Before that, however, I was supposed to withdraw 324,708.83 USD. I didn't need to be told twice.

But now came the catch. You can't just withdraw like that. First I had to convert the balance into cryptocurrency and then deposit it into a wallet. (A wallet is a kind of account number with 42 letters and digits.) Not really a problem, except there are just as many networks (42) to choose from.

Since not all wallets support all networks, the money disappears into the void if you pick the wrong one.

And to transfer from one network to another, there are fees. In my case: 4,033 USD.

"Child's play," Albo Pexal¹⁾ suggested to me, but my financial pain threshold had long been exceeded by then. The only consolation was that the 324,708.83 USD was just a virtual gain and the real damage was still within bearable limits.

The scam ended with an email from the platform itself:

"Account maintenance is complete. You can now register a new account with a different email and use it. Thank you."

Musicians would say: "Da capo al fine."

Ladies and Gentlemen

"Under the blankets, all women are the same," a coach once confided to me. Whether he spoke from personal experience, I never found out. He certainly would have had the opportunity, as his squad was full of female students.

And he wouldn't have been the first to take advantage of that. Time and again, the sports scene is plagued by such affairs.

It's hardly worth a chapter, because it should go without saying that coaches must not exploit the dependency of their students to satisfy their sexual desires. Incidentally, the same applies to female students who throw themselves at their coaches to gain advantages.

Both cause unrest in the club, and with that, losses in performance, quite apart from negative press coverage.

I can only recommend a rule from my military days: "Your own secretaries and your comrades' wives are off-limits."

There's nothing more to add. It really should be clear to everyone.

The Project

With the rise of a child from a slum in Kanchanaburi to the top of the world, we achieved something that in itself is worthy of a Hollywood story.²

But it is a single case.

Our goal is to give more underprivileged children the same chance to rise. By building our own fencing center, this story should be repeated on a much broader scale.

The basic idea is the same one I successfully applied with my own sons:

Underdogs should be given an opportunity that they may take, or not. If they take it, they must work their way up through their own performance. Handouts cannot achieve this. They only tempt people into laziness.

To achieve this, we intend to bring together children from wealthy families and children from poor families in a shared training facility.

As a further step, the project also plans to include athletes with disabilities in the fencing family and have them train and compete alongside each other. And if a transgender person applies, they are welcome to join the training as well. For

competitions, however, attention should be paid to XX/XY DNA, simply for the sake of equal opportunity.

A training and competition hall with 8 standard pistes and 8 wheelchair pistes should be sufficient.

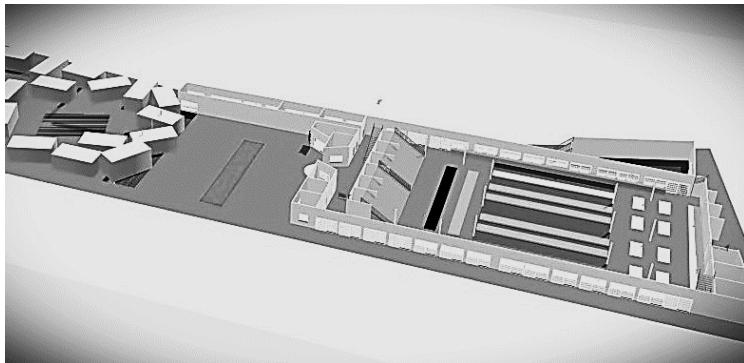

A fitness studio will ensure that athletic components can be further developed.

A culinary facility will provide balanced sports nutrition. It is an essential factor in high-performance sports.

Offices, workshops, retail spaces, press rooms, and classrooms will provide all necessary services around such a center. A spectator tribune should attract audiences to tournaments and training sessions.

Connected to the heart of the center is a “swallow’s nest”: individual container-style houses serving as accommodation for coaches, fencers, and guests.

And why fencing, of all things?
Because we know what we’re doing.
The success story of Somkhit and Willi already proved, on a small scale, that it works.

Model of the fencing center:

With this, the dramatic arc would reach its peak.

We stand at the turning point of the story. Will the goal be achieved, or will the implementation fail?

No one knows. The narrative tension breaks. A story with an open ending?

Will a rich widow appear?
Will AI win the race?
Or will a sponsor be found?

One percent of what a billionaire supposedly offered a world-famous footballer to promote LGBTIQ topics should be enough to fund this project.

Will the fight outside the fencing piste be won or lost?

Johannes Kremser from Austria already offers an alternative in case of failure:

"Could I rent the property to let my cows graze on it?"

In the worst case, the story's arc would lead back to my childhood, when I spent school holidays with my cousin Michaela, herding Uncle Arthur's cows on the alp.

Engarde

When Willi was asked by a reporter what he believed in, he said:

"I believe in myself."

Me too. And you?

Epilogue

Norbert speaks up. He writes the concluding words:
"Your book is like a tree that slowly but surely puts
down roots and begins to grow.

Every word is a leaf, every sentence a branch, and
with each day you work on it, the trunk grows
stronger and the crown broader.

Soon it will be a magnificent tree, bearing rich fruit."

Section 6

Appendix

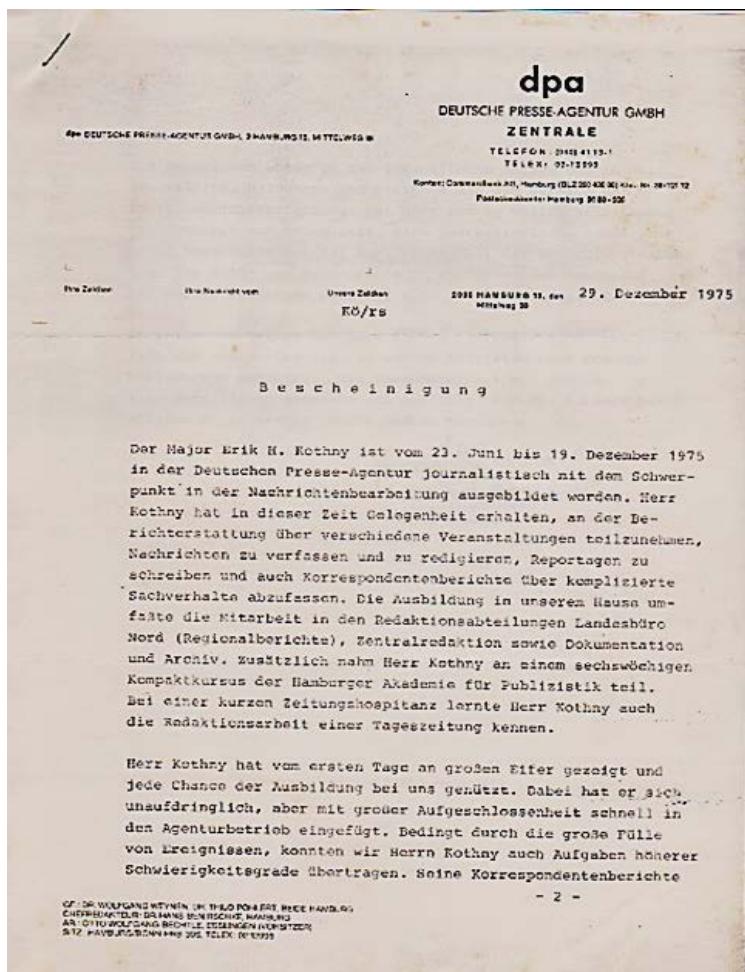

Willi and Somkhit were an unlikely pair as fencers and coaches. Willi was in the spotlight, while Somkhit supported him and did the dirty work behind the scenes. He kept things running smoothly. Both their contributions were equally valuable

Appendix 2

Erik Kothny

Chonburi 20150 Thailand

An den
Deutschen Fußballbund
Kennedyallee 274
60528 Frankfurt am Main

Via: info@dfb.de

Subject: Captain's Armband

To introduce myself so that you can place me correctly:

Erik Hanns Kothny
Born 1940
Raised in the Sudetenland, Austria, Norway,
Germany
Major in the German Armed Forces (Bundeswehr)
and TV journalist at SWR
No political party or religious affiliation
Father of one daughter and two adopted Thai sons.
One of them, Willi Kothny, is known as a sabre fencer
of the German national team with the following titles:

8× German Champion
1× European Champion
2× World Champion
2 Olympic medals (Sydney)

As his manager, I know the world of sports. That is why I am writing these lines to you.

When Thomas de Maizière launched the campaign "Sport and Politics United Against Right-Wing Extremism" in January 2011, the German Olympic Sports Confederation abandoned its self-defined goal of strengthening social cohesion and reducing social distance. The shared interest in sport and movement has been clouded ever since.

(www.vereint-gegen-rechtsextremismus.de)

This slogan does not unite, it excludes.

Why? Because it targets only one political direction. If de Maizière had at least created the slogan "Sport and Politics United Against Extremism", he would have maintained the necessary neutrality and excluded all extremist currents. Instead, the politicization of sports was given free rein, whether through Uli Hoeneß railing against the AfD as Bayern Munich president, or the president of Eintracht Frankfurt questioning whether AfD members should be allowed to belong to the club.

The spark spread to the kneeling of entire teams for Black Lives Matter, and to the rainbow armband worn by captains of club and national teams.

My appeal at the time to the German Olympic Sports Confederation fell on deaf ears. As the manager of a fencer, I wrote:

A video was intended to reinforce my appeal:
<https://youtu.be/PX784u8fYmg>

The results of this politicization are well known. Instead of living sport, politics clogs the minds of the athletes (see the results of the German national football team).

In sport, Whites should play next to Blacks, Muslims next to Christians, heterosexuals next to gay people, Greens next to AfD supporters.

Because of physical differences, one might even distinguish between XX and XY chromosome carriers and end the nonsense of 72 "genders."

Therefore, my demand:

The DFB should define the appearance of the captain's armband in its statutes, just as it defines the size of the ball or the goal:

"The captain's armband consists of a black 'C' on a white background."

This would remove politics from sport and return football to what it should be:

The most beautiful minor matter in the world.

With kind regards,

Erik Kothny

Appendix 3

Erik Kothny

Chonburi 20150 Thailand

Herrn

Thomas Bach – Persönlich -

Maison Olympique

1007 Lausanne

Sehr geehrter Herr Bach.

The name Kothny is probably familiar to you, since my adopted son Wiradech 'Willi' Kothny, whom I adopted from a tin shack in Kanchanaburi, took part in three Olympic Games as a sabre fencer and won two bronze medals for Germany in Sydney. Since then, I have followed all events surrounding sports very closely.

I was truly shocked by the 2024 opening ceremony in Paris. I will spare you an evaluation, because you are likely already being flooded with comments from around the world. But this sad climax did not come out of nowhere. The division of sport, which should unite people, will continue unless the emergency brake is pulled immediately. I call it an emergency brake because, with the boxing match Imane Khelif vs. Angela Carini, the Olympics are on the verge of breaking apart completely. Hence this letter:

Thomas de Maizière's campaign in 2011, 'Sport and Politics United Against Right-Wing Extremism,' created the unfortunate liaison between sport and politics and severed the intrinsic unifying bond of mutual understanding that sport naturally provides. From that point onward, division spread into all sports, whether through political statements during award ceremonies or the wearing of multicolored political symbols on captain's armbands, as if sport needed to outdo the inherent diversity it already embodies: The white athlete plays next to the black athlete, the gay athlete next to the straight one, the Muslim next to the Christian...

Beyond that, it would be utter nonsense in fencing, for example, to train an athlete only to defend against attacks from the right. You, Mr. Bach, know as a fencer that attacks also come from the left and from above. As a competitive athlete, your coach prepared you to respond to all attacks; only politics does not understand this.

<https://youtu.be/PX784u8fYmg>

And as the Olympic Games in Paris show, even there sport follows its woke master like a little dog.

The queer sociopolitical movement is in the process of taking possession of sport and of the Olympics, pushing 'faster, farther, higher, better, and stronger' into the background. I know what I am talking about:

I myself was long friends with a transgender person—without knowing it; after all, one does not reach into the pants of every acquaintance. When I found out, I tried to put myself in this person's position and gained understanding for her/his way of life. This otherness must be respected in everyday life.

But in sport, alarm bells must ring, because the biological differences between the two sexes lead to distortions of competition. Paris demonstrated this clearly.

To prevent the now, emerging conflict over queer ideology from escalating further, and to avoid discriminating against men who feel (socially) like women, I propose that future competitions no longer be divided into women's and men's events, but that a neutral hair or saliva test be carried out before competitions to determine, objectively and soberly, as with a blood test, the chromosomal composition. Depending on the result, athletes would then be assigned to the XX or XY categories. Equal opportunity would be preserved, and emotional gender identity would not be violated. No one feels discriminated against when they are assigned to a certain weight class, either.

Now, there are borderline cases where such a clear assignment is not possible. A doctor I know explained this to me, and you likely know it as well. There are exceptions:

XXX ("so called superwoman")

X (Turner syndrome with only one X)

XXY, also XXXY and even XXXXY (Klinefelter syndrome)

XYY, XYYY, XYYYY, etc.

Worldwide, and presumably also in sport, about 1.7% of people are affected by these exceptions. But it cannot be the case that a tiny number of individuals, who deviate from the majority of XX-chromosomed people, gain a competitive advantage through their particularity.

In the interest of fair competition, it would be important for the IOC regulations to specify with which chromosomal composition one counts as a woman, and where the threshold to being considered a man is crossed. If necessary, participation in the Paralympics could also be considered. This is not discrimination. My son Willi, for instance, is friends with Thai wheelchair fencers and will serve as referee at the Paralympics in Paris at the end of August. He is proud of that. So am I.

However, I suspect that the current confrontation between political forces is being deliberately

provoked. The example of the captain's armband makes this clear: Through a simple rule change, it could be established that the captain of a team wears a white armband with a black 'C'. Period. But no, the armband is politicized with rainbow colors, triggering an ongoing controversy detrimental to sport. This became painfully obvious in Qatar during the World Cup. Instead of accepting a neutral captain's armband, the Sports Minister escalated the controversy politically by wearing a One-Love armband as a spectator, making it clear that her concern was not sport, but its political ideologization.

After Qatar, I already suggested to the DFB that this politicization should be stopped by regulation, but received no answer, presumably because there is no interest in resolving the conflict. The outcome is well known, and you, as a fencer, Mr. Bach, know how such unnecessary discussions outside the piste impair an athlete's performance. Put an end to it.

And now I leave you alone with the decision. I am quite certain that the XX/XY solution I have proposed will find support in the less degenerate countries and especially among women.

Yours,
Erik Kothny.

Appendix 4

Facebook conversation in the original. Only the name “FC” – based on the abbreviation for Football Club, was changed.

FC¹ 20 October 2024 at 23:58

On 20 October 1976, a footballing child prodigy from the slums of Buenos Aires began his football career and played his first, first-division match at the age of sixteen for Argentinos Juniors. A few years later the whole world knew him. He became the best player in the world, perhaps the best of all time. They gave him the nickname “Football God” (Spanish: “Dios”), and combined with his jersey number “10”, the famous spelling emerged that fans around the world printed on their shirts: “D10S”.

But he was much more than just the greatest footballer of all time. Similar to Muhammad Ali, he campaigned for the global South and never betrayed his class, the underprivileged.

He fought against US imperialism and publicly attacked the American president Bush Jr.

And he, like his Argentine countryman Ernesto Che Guevara, loved Cuba. Both also received dual citizenship. Diego Armando Maradona wore a tattoo of Che Guevara on his upper arm and one of Fidel Castro on his calf.

Of course, he was no angel. The fact that he also took drugs was used by right-wing media to stir sentiment against him, something hardly possible on footballing grounds. He was labelled a cokehead and mafia kid because he played for Naples, where he is still revered like a saint today. When he died, fans around the world cried. In Argentina and Naples there were mass gatherings of people who publicly showed their love for their idol. Diego was the greatest.

The musical tribute given to him by the Argentine singer Soledad is dreamlike.

Look: https://www.youtube.com/watch?v=_sKeWiRArZs

Reply Erik Kothny: There are also top athletes who do not take coke and who do not lean politically out of the window either to the left or to the right and glorify the violence of ideologies.

And precisely this political engagement in sport prevents people from coming closer together. Disgraceful. ("Pfui.")

Reply FC: Disgraceful? My thanks in return. Athletes who close their eyes to social reality are opportunistic crawlers before the system. And not neutral.

Reply Erik Kothny: FC, only an embittered ideologue can argue like that. Sport is supposed to connect, bring people closer together. Black should measure his strength

beside White, the Green beside the AfD member, the Nazi beside the Communist.

Sport is supposed to build bridges. Only deluded ideologues misuse sport for their purposes.

Your answer has given me deep insight into your way of thinking. Now I also understand how someone like Nancy Faeser misuses sport for her political aims, or a Peter Schreiber. Disgraceful!

Reply FC: Erik Kothny, bourgeois nonsense. You and your “disgraceful!”

Reply Erik Kothny: “Bourgeois nonsense” is an answer on a high intellectual level. That way one doesn’t need to discuss content anymore.

2nd Reply Erik Kothny: I’ll give you the answer anyway. In a book.

Reply FC: Erik Kothny, I wrote that extraordinary athletes like Ali or Diego became athletes of the century because they were against the establishment, accepted personal disadvantages, but never allowed themselves to be corrupted by the powerful (unlike your “neutral” athletes, by the way). You can see it differently, but to respond with “disgraceful” is = disgraceful! I returned the

disgraceful, not aimed at you, but at your disgraceful. And after you lashed out and I didn't bow, you start playing the victim. And that is not neutral, but: typical right-wing! First hit. Then "mimimi."

1st Reply Erik Kothny: FC. You'll get my answer in the book.

Thank you for helping me with the prologue. I couldn't have done it so well alone.

2nd Reply Erik Kothny: I am neither "mimimi" nor right-wing, and I am not defending myself, I am attacking.

Also nice that you just added another paragraph to my prologue. You're a true friend.

Anyone who wants to know how FC is politically aligned will find out on his Facebook page from 24 October 2024:

for me now blocked

"The enemy stands on the right. Always has. In Germany, America. Everywhere. Glück auf."

My reply: "Objection!"

The enemy does not stand only on the right, but also on the left and in the religions. Whoever sees the enemy only on one side has a distorted perception. ”

Appendix 5

The European Champion Who Came from Thailand

by Egon Theiner

It was one of those moments that will go down in the history of the European Fencing Championships. It was the moment when Wiradech Kothny, number 30 in the sabre world rankings, leapt at reigning world champion Luigi Tarantino like a wildcat, landed the decisive touch for a 15:14 victory, and crowned himself continental champion in this weapon on Thursday afternoon in Bolzano (South Tyrol). A moment that left the current, but luckless, Industry leader Tarantino only shaking his head and making several inappropriate remarks. Such as: "I should probably go look for the nearest tree and hang myself." Or: "If I can't win this final, then I'll never be European champion." Or: "It will never be as easy for me to win EM gold as it was today."

Inappropriate remarks from a sulking superstar. Tarantino had led 4:0, later 8:5, and at 13:11 looked like the certain winner. And then this. A 20-year-old German, reigning junior world champion, stole the gold from the star in front of his home crowd. Kothny had planned to fence calmly against the

Italian, but after the first hits quickly changed his tactics, began to act instead of react, and was rewarded with the victory, won in the style of a mongoose, one of those leaping predators that hunt snakes in Asia.

At his club in Koblenz, Kothny is called "Mungo" (Mongoose), because he is of Thai descent and performs the leaping style on the fencing piste to perfection. His first name, Wiradech, was changed to "Willi" by the mother of his adoptive father, Erik, to make it easier to pronounce. Literally translated, the name means "the fighter." Rarely has a name been more fitting than that of the young German who fought through the preliminary round like a seasoned athlete, then eliminated Frenchman Damien Touya, number five in the world rankings, froze for a moment out of sheer awe of the name Tarantino, and after the job was done, casually stated, "I just wanted to knock on the door and say hello to the absolute world elite." A brief hello is meant to become a permanent

Der Mungo beim Angriff
WM der Junioren in Ungarn 1999

“Here I am again.” But Kothny knows the road ahead is long. “I’m still young, I go through highs and lows,” says the sabre fencer, who celebrated his triumph in the South Tyrolean capital with his teammates, had dinner at an Italian restaurant, and went to bed early.

Today, Friday, the native Thai who came to Germany at the age of two and a half is relaxing at Lake Monticolo (near the better-known Lake Caldaro). The exertion of racing from Havana to Bolzano is forgotten; he smiles at the memory of the night before his big day, when he could not fall asleep until 3:00 a.m. (and subsequently overslept). His body rebelled, his mind less so, and thus the German fought his way from bout to bout through the competition successfully.

That Wiradech grew up in Europe is thanks to a fortunate twist of fate. In 1981, his adoptive father, Erik Kothny, undertook a world trip through crisis regions, met his future wife in a Thai orphanage, brought her back to Germany, married her, and adopted Wiradech. The Asian in a European body. “I fully absorbed the German upbringing, and I don’t have Thai character traits either. For example, I don’t bow as a younger person before older ones, as is customary in Southeast Asia.” Wiradech feels

German, though he also speaks Thai "enough to make my way from north to south."

**Dennis Bauer, Eberhard Mehl,
Willi Kothny**

It took Erik Kothny a year to nurse his adopted son, who arrived undernourished and with a distended stomach, back to health. His school sports teacher introduced him to fencing.

Eberhard Mehl, Olympic bronze medalist in foil at the 1960 Rome Games, recognized Kothny's talent. The native Thai collected five German youth championship titles and won the junior world

championships in sabre in Hungary over Easter. Currently, he tops the German senior national ranking. European Championship gold is the provisional highlight of his career.

Other outstanding and meaningful moments are to follow. Having completed the 12th grade with a technical secondary school certificate, Kothny is taking a one-year leave to complete his civilian service. But he will be granted release time for fencing training in preparation for the world championships and the Olympic Games. In effect, “the fighter” will spend the next twelve months solely on sabre fencing. “After Sydney, I’ll finish my Abitur,” explains Wiradech, who from now on will receive tutoring in his weaker subjects (biology and mathematics).

In Bolzano, he proved that he can certainly count to 15, and fence. “My victory shows that in Germany, very good youth development work is being done in sabre fencing,” he says thoughtfully about his discipline. “The young generation is coming. You can feel it.” And if anyone hasn’t noticed, they may ask Luigi Tarantino, already 26 years old.

Koblenz Rhein-Zeitung. Olympic Report

In Beijing, many things went wrong for Kothny

Säbelfechter Kothny will sich nun seinem Studium widmen.

At the end of a sporting career, success is not guaranteed.

Saber fencer Willi Kothny had hoped to reach great heights one more time. Now he looks back on the Beijing Olympics with mixed feelings, because even during the preparations, a lot had already gone wrong.

KOBLENZ.

“Beijing will stay in my memory for a long time,” says Willi Kothny of CTG Koblenz, recalling his third Olympic appearance. The 7:15 bout for a place in the round of the last 16 against the eventual Olympic champion Zhong Man was not only the end of all medal hopes, but also marked the end of his sporting career.

“I wanted to perform well in China, but that plan failed,” the German-Thai athlete from Koblenz states matter of factly. “And the fact that this lost bout would also be my last. Well, I already knew that beforehand.”

At least he can look back on three Olympic Games. After winning bronze in Sydney 2000 and finishing a solid 13th four years later in Athens, here a meniscus injury troubled him. Wiradech “Willi” Kothny had high ambitions for Beijing.

“Had I defeated the Chinese, I might have gone all the way,” he says. “Why not? After all, no one expected Zhong Man to win gold (Kothny: A wild dog, but apart from strength he has nothing to offer), and his final opponent Nicolas Lopez from France was ranked behind me.”

Not ideally prepared

That Kothny finished only 25th in this Olympic saber event full of surprises had its reasons. His twelve month preparation in Germany was better than it would have been in Thailand, but still far from optimal.

He found sparring partners only in Dormagen, where he drove once per week.

“A joint training setup with Dennis Bauer in Koblenz failed due to scheduling issues, and the officials didn’t want it either,” says Kothny. National coach Gabor Körmöczi was unavailable for lessons. “He would have sacrificed his free time to bring a fully trained fencer to the Olympics,” Kothny says. “But that failed because of the German Fencing Federation and the state sports association. My Olympic preparation suffered because of that.”

He had to make the best of it. Physically he was in good shape thanks to gym training (“I had

absolutely no back problems anymore”), and technically prepared by CTG saber coach Erhard Bauer and the Dormagen sparring partners, Kothny flew to Asia, where the trouble with the Thai Fencing Federation (AFAT) began.

“The training camp in Tianjin had to be canceled because the federation hadn’t registered a coach.” On 4 August, Kothny arrived in Beijing, found an excellent training hall, but his coach, Somkhit Phongyoo, had no accreditation. So he lost three hours every day commuting from the Olympic Village to a private practice hall. Under pressure from Kothny, who turned to the media. The federation finally sent a team manager two days before the competition, far too late for necessary discussions with Olympic officials. “He was more of an Olympic tourist,” Kothny says, “and he did not want to or was not allowed to give his accreditation to my coach.”

During the bout against Zhong Man, his coach was missing in the box, the area at the end of the piste. “I would have felt much better if my brother Somkhit had been sitting there.”

So Kothny is left with mixed memories: a spectacular opening ceremony and time spent with other athletes; but also a competition where, from

the preparation to the final bout, everything that could go wrong did go wrong. And finally, his farewell celebration on 15 August, which naturally took place outside, since parties in the Olympic Village are nowadays just a rumor.

Kothny has put down the saber and now more often picks up a camera: "While I'm still here in Koblenz for four months, I'm doing training with my father, TV journalist Erik Kothny." Later, in Bangkok, he will complete his studies in communication science, focusing on advertising, supported by a university scholarship.

"As a fencing coach, I wouldn't be as competent as Somkhit, who learned under Eberhard Mehl," says Kothny. He has no desire to continue a sporting career in Thailand, where he would have to work with a federation he considers "corrupt and incompetent, with the military pulling too many strings." Ideally, he sees his future along the Rhine and Moselle: "Koblenz is my city."

—Thomas Wächtler

Counterexample

Flashback: Olympic Games, Sydney 2000.

Just like in Beijing, the number of coaches allowed inside the Olympic sports areas was limited. This affected combat sports the most (one coach per athlete).

Lucky man: Teamchef Matthias Behr

Germany's fencing team leader, Matthias Behr, did not let the IOC rules deter him. He looked for a solution, and found one, as I wrote in my report at the time:

"Head of the fencing hall is Michael Read, a confident young man who seems to be everywhere

at once, diplomatic, well-organized, and talented in countless ways.

Without him, the German fencers would have had a hard time at the Olympics. Unlike major fencing nations such as Russia, France, or Italy, whose athletes train at national centers with their national coach. Germany relies on its home coaches, none of whom had accreditation.

Zwei Tage Pause für
Dennis Bauer und Willi Kothny...

The IOC planned for home coaches to be identified daily in the Olympic Village by team leaders in order to receive a day pass. Due to long travel routes,

Eberhard Mehl, for

example, would not have been able to conduct early-morning training on many days.

But Michael Read showed foresight, ignored petty regulations, allowed home coaches to be identified on the spot by team leader Matthias Behr, and granted them uncomplicated access to training without compromising security. Bravo, Michael; this is the true Olympic spirit!"

Functionaries who actually function.

In the end, the German saber fencers won two medals.

Appendix 7

Olga Kharlan

Will Fencing Be Removed From the Olympic Games?

When Russia violates the rules, no one is surprised anymore.

But when the FIE covers up these violations, it is a slap in the face.

A slap to the IOC and its recommendations.

A slap to the Olympic Charter.

And a slap to every fencer.

Russia currently has such influence over the FIE that the federation openly violated the IOC's recommendations by allowing brazen war propagandists and members of the military to compete and even including them in the team rankings.

And these are not just technical documents, these recommendations are written in blood.

At least in the blood of more than 650 Ukrainian athletes who have been killed by Russia in this war. And at the same time, the murderers in sportswear, are standing next to you on the same start line.

Let me remind you: systematic violations of the IOC's recommendations can lead to a federation losing its Olympic status.

My colleague @cyrusofchaos has been warning about this for a long time.

It has already happened in boxing, and although it hurts, boxers at least have other major arenas: WBA, WBC, IBF.

In fencing, the Olympic Games are the only global peak.

The pinnacle of our dreams.

And that is exactly what the FIE is now putting at risk by allowing Russia to misuse the sport as a tool of war.

This is not about a few individual athletes.

This is a systemic campaign involving soldiers and supporters of Putin.

Yes, the military officer Sofya Velikaya, major in the Russian army. Is not just a fencer.

She is an instrument of state propaganda, part of a vast machinery that has justified war and violence for years.

The athletes from CSKA are part of the army just as a saber is an extension of the hand that wields it.

And if anyone still thinks this has nothing to do with fencing, let me remind them: fencing was the first federation to betray the Olympic principles.

And this could be the drop that finally makes the barrel overflow.

Appendix 8

Letter to the FIE regarding Olga Kharlan

Erik Kothny Banglamung, 08 September 2025

An den Interims-Präsidenten der FIE
oder Beauftragten.
Maison du Sport International
Av. de Rhodanie 54
1007 Lausanne
Switzerland

Dear Mr. President,

My name is Erik Kothny. I am the father of three-time Olympic fencer and two-time bronze medalist Wiradech Kothny (Germany/Thailand).

I am currently writing a book titled:

"We show you the way, but you must fight alone."

This book includes a chapter on Olga Kharlan, who at the 2023 World Championships refused to shake hands with the Russian athlete Anna Smirnova at the end of their bout.

Because this has been interpreted differently in the media, I would like to receive a precise answer regarding the applicable regulations at the 2023 World Championships.

Two of my email inquiries (04.08.2025 and 16.08.2025) to the FIE press office have remained unanswered.

I kindly ask you, Mr. President, to instruct someone from your organization to respond to the following questions:

When (date) was the rule requiring fencers to shake hands after the final touch suspended (due to COVID)? And what was the wording of this regulation?

When (date) was this regulation lifted?

With sincere thanks and kind regards,

Erik Kothny

A few remarks about my books:

As a journalist at SWR, I focused on current situations, exactly as they revealed themselves to me, unvarnished and honest. I portrayed people from the region, mostly ordinary people. I left the celebrities to my colleagues, who needed to bask in their glow more than I did.

After my journalistic career, with the political turning point came the problems that arose from Angela Merkel's policies. That required particular steadfastness.

Beginning with the analysis "Deutschland, es brennt" (Germany, It's Burning) and continuing to the reflection "Migration Remigration," my struggle is described, one that I fought primarily with a judiciary loyal to the government.

And I fought this battle alone as well.

Bücher

Der Schriftsteller Heinrich Peuckmann hat die reale

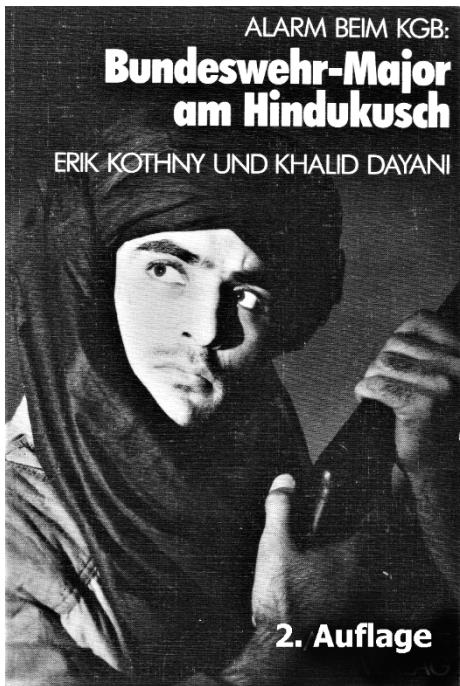

Geschichte von
Willi Kothny zu
einem Roman
verarbeitet.

Die Fakten sind, bis
auf die Namen,
authentisch:

Einige Ausschmük-
kungen am Rande
der realen
Handlung machen
aus dem
Buch einen
Roman.
Super erzählt, wie
ich es nicht könnte.

Der Roman erzählt dieselbe Story, wie dieses Buch,
nur aus einem romantischen Blickwinkel.

ISBN-13 : 978-3967632064
ISBN-10 : 3967632067

ISBN978-3-935286-18-3

Es war 1981, als mich die Abenteuerlust packte und ich mich aufmachte, um den Kampf der Mudjaheddin gegen die Sowjets mit meiner Kamera zu dokumentieren.

Ich war damals Major bei der psychologischen Kampfführung. Ein Abenteuer, das ich ohne Erlaubnis meiner Vorgesetzten

durchzog. Es hätte mich den Job kosten können oder das Leben.

Mich interessierte vor allem, welche Rolle die psychologische Kriegsführung in diesem ungleichen Kampf spielt. Das Ergebnis überraschte mich: Die „Russen“ waren nur halb so brutal, wie uns die westliche Propaganda weiß machen wollte, dafür waren die Afghanen schlimmer als gedacht.

Ich zog mir den Shitstorm beider Parteien zu.

Autor Erik Kothny hat zwei asiatische Adoptivkinder aus den Slums in Kanchanaburi nach Deutschland geholt und ebnete nach Schule und Ausbildung deren Weg zurück in ihr Geburtsland.

Er war Major der psychologischen Kampfführung.

Er war Reporter beim SWR.

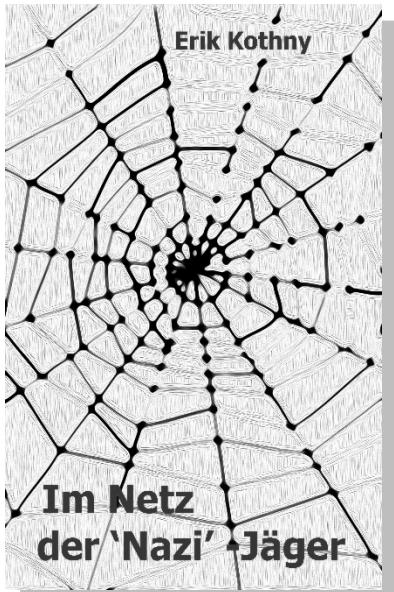

ISBN: 9783753122595

Aus diesen drei Blickwinkeln beurteilt er die Flüchtlingskrise: Die Integration, so wie von Angela Merkel verordnet, kann nicht funktionieren.

Und weil die Integration nicht funktioniert, greift die Politik zu Mitteln der psychologischen Kampfführung, um das Volk zu beruhigen: Desinformation, Infiltration, Zensur, Täuschung, Unterdrückung der freien Meinung.

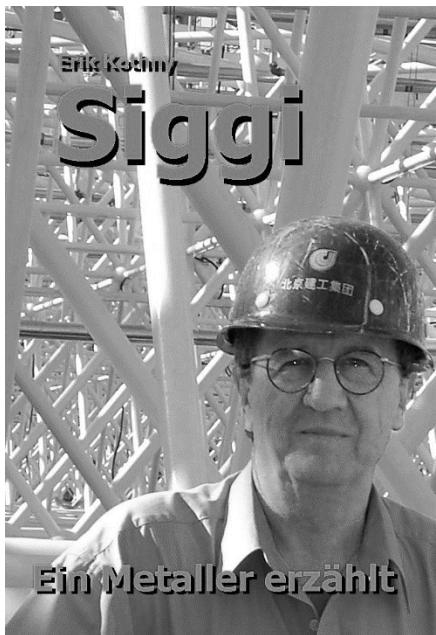

Das Buch basiert auch auf Fakten eines Polizisten.

ISBN: 9783753175973

Medien machen sich zu Handlangern der Macht. Marodierende, gewaltbereite Menschen verwandeln Deutschland nach und nach in eine Landschaft, in der niemand sicher ist. Jeder, der dies kritisiert, wird als Nazi denunziert, ausgeworfen, verfolgt, und durch staatlich geförderte Schlägertrupps der ANTIFA mundtot gemacht.

Keiner ist vor den Nazijägern sicher. Nicht einmal der damalige Präsident des Verfassungsschutzes, Hans-Georg Maaßen. Durch eine konzertierte Lügenkampagne von Angela Merkel und ihrem Pressesprecher Jochen Seibert wurde er aus dem Amt gejagt. Eine erfundene Hetzjagd wurde umgedreht. Anhand selbst erlebter Beispiele zeige ich das Netzwerk der Nazijäger auf.

Siggi ist eine Sammlung von 55 Geschichten, die sich Autor Erik Kothny und sein Feriengast Siggi fast jeden Morgen beim Frühstück erzählten. Bunt zusammen gewürfelt und unterschiedlich lang.

Geschrieben ist dieses Buch gegen alle „Political Correctness“.

ISBN: 978-3-753175-97-

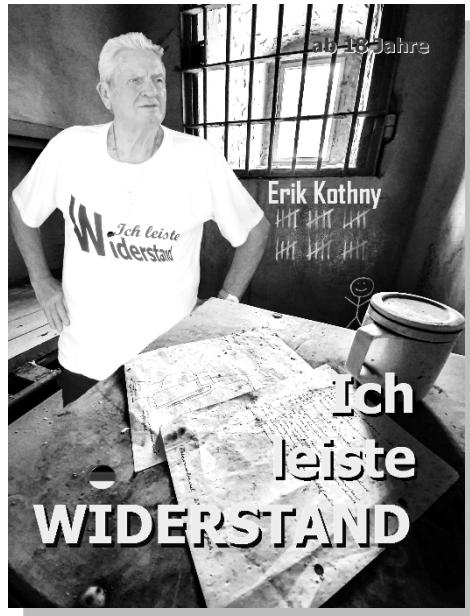

Kurzum:

Die Erzählungen sind genderfrei und unterwerfen sich nicht dem Mainstream. Sie sind so wiedergegeben, wie einem gestandenen Metaller das Maul gewachsen ist. Der Autor hat seine Sprache authentisch übernommen.

Siggi schildert, was er als Angestellter von Bilfinger und Berger in China, Iran und Nigeria erlebt hat.

Manches lässt Rückschlüsse auf heute zu und warum es in einer Multi-Kulti-Gesellschaft zu Problemen kommen kann, wenn zu schnell zu viele Menschen aus anderen Kulturkreisen in unser Land kommen.

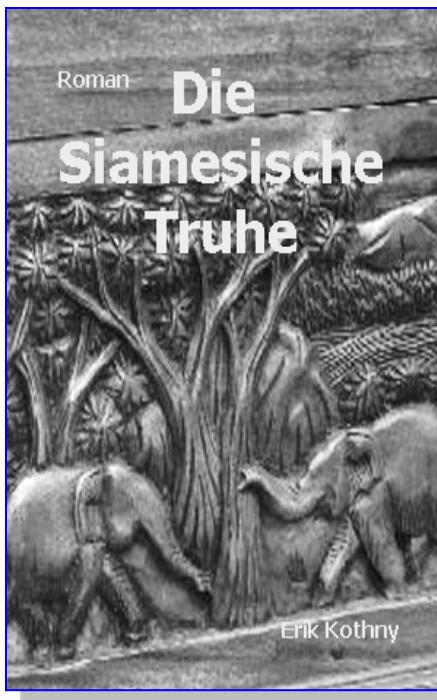

Mit einem Haken setzte das Amtsgericht München die grundgesetzlich garantierte Unverletzlichkeit der Wohnung außer Kraft. Auslöser war der FB-Post einer geschächteten Frau durch IS-Schergen, als Antwort auf einen, den Islam Verharmlosenden Kommentar des Rektors einer TU.

ISBN: 9783753114781

Dann begann eine Orgie von Rechtsbeugungen, die sich der ehemalige Bundeswehr-Major und TV-Journalist nie hätte träumen lassen. Mit Methoden, die der Autor bisher nur aus dem kriminellen Milieu kannte, landete er im Fahndungscomputer der Polizei.

Danach erschlich sich die Polizei eine als Quittung getarnte Unterschrift für eine Vollmacht. Elektronische Beglaubigungen ersetzten Beschlüsse. Maschinen machten Unterschriften überflüssig. Der Autor beschloss, Widerstand zu leisten.

Dieser Roman spielt im Jahre 2048.

Deutschland ist in unzählige No-go-Areas zerfallen. Navin, Sohn eines Deutschen und einer Thailänderin, wächst in zwei Kulturen auf. Navin wird in Deutschland Polizist und beauftragt, eine schwangere Frau

festzunehmen, die gegen das Rassen-Gesetz verstößen hat. Ihr Kind soll abgetrieben werden. Als Buddhist ist Navin aber verpflichtet, Leben zu schützen. Er befreit die Frau.

ISBN: 9783753166421

Auf dem Dachboden des Hauses seiner Ziehmutter entdeckt er eine siamesische Truhe mit Dokumenten. Aus Unterlagen, die sein Vater gesammelt hat, wird ersichtlich, wie es zum Untergang Deutschlands kommen konnte.

Navin schließt sich dem patriotischen Widerstand an, wird entdeckt und vor Gericht gestellt.

Ein unglaublicher Vorgang in der Justizgeschichte.

Der Rektor der TU Dresden postet ein Bild von sich, mit einem Pappkarton in der Hand:

„Ich bin Rektor der TU Dresden und einer von mehr als 500.000 Dresdner, der nicht zur Pegida geht.“

Der Autor, ehemaliger Bundeswehrmajor und TV-Journalist, setzt das Bild einer geschächteten Frau dagegen.

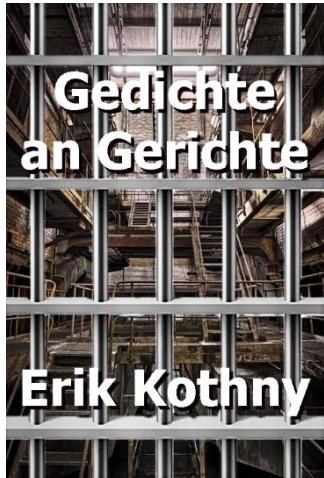

ISBN-0.3750202486

Dann geht es vier Jahre lang „Schlag auf Schlag“.

- „Bitte des Rektors“ an den StA, das Bild zu überprüfen.
- Die Justiz: „Rechts-politische Kriminalität“.
- U-Richter bescheinigt „Schwere der Tat“.
- Hausdurchsuchung 1 – Schlag ins Wasser.
- Hausdurchsuchung 2 – Schuss in den Ofen.
- Angebot des Staatsanwalts, das Ganze gegen Zahlung von 500,-- Euro einzustellen. Durch Autor abgelehnt.
- Strafbefehl des Amtsgerichtes über 600,--€
- Anklage vor dem Amtsgericht.

In diesem Buch lesen Sie das Plädoyer des Autors.

ISBN: 978-3-819030-81-9

Erst küble ich als Dichter
Spott und Hohn auf Richter.
Dann auch auf den
Staatsanwalt
Und die politische Gewalt.

Wenn Sie mein Handeln nicht
verstehn,
In den nächsten Absatz gehn.

Da erklär' ich ihnen dann,
Wie es zu dem Giftpfeil kam.
Weshalb, wozu, wieso, warum,
Und alles Weit're drum herum.

Wer das noch immer nicht versteht,
In den Quellennachweis geht.

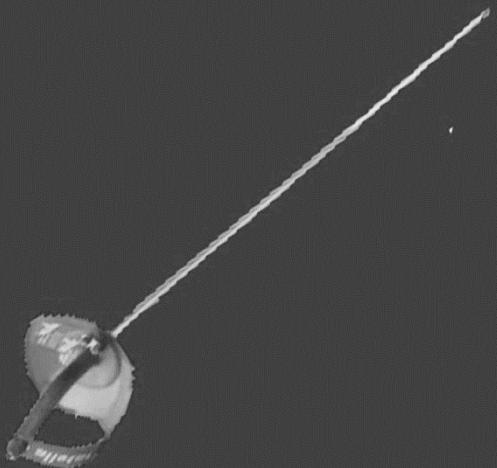

Doch die Worte dort sind spröde.
Fachchinesisch, manchmal blöde
Und nur der Jura-Masochist
Liest begeistert diesen Mist.

Deshalb sind auch meine
Reime
Nicht das Seine.
Denn dieses Gift
Mag das Gesindel nicht.

Migration Remigration

**Ist Remigration ein Unwort? Nein!
Voraussetzung allerdings: Es muss zuvor
die Migration erfolgreich verlaufen sein.**

**Am Beispiel meiner Söhne zeige ich auf,
wie Migration und Remigration gelingen.**

**Beide Kinder sind in einer Blechhütte am
River Kwai aufgewachsen, ehe sie nach
Deutschland kamen und sich integrierten.**

**Nach einer erfolgreichen Sportkarriere
gingen beide in ihr Geburtsland zurück.
Sie machten weltweit Schlagzeilen, als sie
ein vom Tsunami zerstörtes Fischerdorf
mit deutscher Hilfe wieder aufbauten.
Beide sind heute in beiden Kulturen zu
Hause. Dies gelang nur, weil sie in
beiden Ländern
Leistung
erbrachten.**

**Jetzt lebe ich
als Migrant
bei ihnen.**

ISBN: 978-3-818736-59-0

Dedication

This book is dedicated to my grandmother Frieda Pommer. We lovingly called her Omi. Omi understood as much about fencing as I understand about cooking.

After being expelled from the Sudetenland, Omi ran a small inn in Köflach near Graz.

The "Gasthaus zur Linde" stood just a stone's throw from the church.

At midday, Omi cooked good, inexpensive home-style food, which her daughters Lisl and Sissi served to the workers of the industrial town.

I noticed that in the anteroom of the inn, two plates were always set, complete with knife and fork.

"For the poor," Omi said.

My grandmother did what the priest preached about in the church across the street.

But I never saw her in that church.
So she couldn't have learned her charity there.
It must have come from within herself.

Omi fought for the family all her life and never gave up.

Her saber was her wooden spoon.
Perhaps she is an example for fencers who act out
of inner conviction, free of outside influence.

She once gave me a golden Omega watch, saved
from her own mouth.
A watch that reflects the spirit of its era:
No batteries, no digital display.

It was called "Automatic" and ran on its own.
An inner mechanism ensured that with every
movement of the arm, the mainspring wound itself.

This Omega accompanied me through my youth.
Today, my son orients himself by it.

It carries into the present the wisdom of Hermann
Hesse, that before you can step onto a new stage,
you must leave the old one behind.
Hesse also gives courage to follow your own path:

**"And every beginning holds its magic,
That protects us and helps us live."**
